Notes:

m AMSL	Metres above mean sea level
m BGS	Metres below ground surface
NA	Not available
SU	Stickup
FM	Flushmount
*	Well was not used to determine groundwater direction contours due to construction details that do not meet current regulations.

Notes:

m AMSL	Metres above mean sea level
m BTOC	Metres below top of casing
m BGS	Metres below ground surface
mm	Millimetres
NA	Not available
NM	Not measured
% LEL	Lower explosive limit. 1% LEL is equivalent to 110 ppm_v based on hexane calibration
ppm_v	All measurements in parts per million by volume unless otherwise noted
*	Well was not used to determine groundwater direction contours due to construction details that do not meet current regulations.
[1]	Well could not be located

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
[A]	Table 3 - Residential / Parkland / Institutional Property Use - Medium Fine Textured Soils
6.5[A]	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
< 0.50	Laboratory reporting limit was greater than the applicable standard.
< 0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit.
HI	Detection limit was raised due to hydrocarbon interference.
MI	Detection limit was raised due to matrix interferences.
RPD	Relative Percent Difference.
61%	RPD exceeds data quality objective of ≤50%.
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
[A]	Table 3 - Residential / Parkland / Institutional Property Use - Medium Fine Textured Soils
6.5[A]	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
< 0.50	Laboratory reporting limit was greater than the applicable standard.
< 0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit.
HI	Detection limit was raised due to hydrocarbon interference.
MI	Detection limit was raised due to matrix interferences.
RPD	Relative Percent Difference.
61%	RPD exceeds data quality objective of ≤50%.
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.

Table 4a
Summary of Soil Analytical Results Exceedances - Petroleum Hydrocarbons

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
[A]	Table 3 - Residential / Parkland / Institutional Property Use - Medium Fine Textured Soils
6.5 [A]	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
< 0.50	Laboratory reporting limit was greater than the applicable standard.
< 0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit.
n/v	No standard/guideline value.
-	Parameter not analyzed / not available.
s7	Standard is applicable to PHC in the F1 range minus BTEX.
s8	Standard is applicable to PHC in the F3 range, minus PAHs (other than naphthalene). If PAHs were not analyzed, the standard is applied to F3.
s10	If baseline is not reached during F4 analysis, then gravimetric analysis is to be performed, and the standard is applied to the higher of the two results.
s15	Standard is applicable to PHC in the F2 range minus naphthalene. If naphthalene was not analyzed, the standard is applied to F2.
RPD	Relative Percent Difference.
61%	RPD exceeds data quality objective of ≤30%.
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes.

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
A	Table 3 - Residential / Parkland / Institutional Property Use - Medium Fine Textured Soils
6.5[A]	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
< 0.50	Laboratory reporting limit was greater than the applicable standard.
< 0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit.
n/v	No standard/guideline value.
-	Parameter not analyzed / not available.
s7	Standard is applicable to PHC in the F1 range minus BTEX.
s8	Standard is applicable to PHC in the F3 range, minus PAHs (other than naphthalene). If PAHs were not analyzed, the standard is applied to F3.
s10	If baseline is not reached during F4 analysis, then gravimetric analysis is to be performed, and the standard is applied to the higher of the two results.
s15	Standard is applicable to PHC in the F2 range minus naphthalene. If naphthalene was not analyzed, the standard is applied to F2.
RPD	Relative Percent Difference.
61%	RPD exceeds data quality objective of ≤30%.
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes.

Table 5a
Summary of Soil Analytical Results Exceedances - Volatile Organic Compounds
Port Credit Brownfield Redevelopment, 70 Mississauga Road South, Port Credit, Ontario
Port Credit West Village Partners L.P.

Notes:

Ontario SCS	Soil, Ground Water and Sediment Standards for Use under Part XV.I of the Environmental Protection Act (MOE, 2011) Site Condition Standards (SCS)
[A]	Table 3 - Residential / Parkland / Institutional Property Use - Medium Fine Textured Soils
6.5[A]	Concentration exceeds the indicated standard.
15.2	Measured concentration did not exceed the indicated standard.
< 0.50	Laboratory reporting limit was greater than the applicable standard.
< 0.03	Analyte was not detected at a concentration greater than the laboratory reporting limit.
s11	Standard is applicable to 1,3-Dichloropropene, and the individual isomers (cis + trans) should be added for comparison.
BI	Detection limit was raised due to background interferences.
HI	Detection limit was raised due to hydrocarbon interference.
IB	The detection limit was raised due to instrument background.
LI	The detection limit was raised due to laboratory background.
MI	Detection limit was raised due to matrix interferences.
TG	Detection limit was raised due to hydrocarbon interferences. Lower detection limit was not achievable.
VP	Detection limits was raised due to background interference.
XI	Detection limit was raised due to interference from coeluting o-xylene.
RPD	Relative Percent Difference.
61%	RPD exceeds data quality objective of ≤50%.
nc	RPD is not calculated if one or more values is non detect or if one or more values is less than five times the reportable detection limit.
