Rev. 1	June 2019	First Submission

1.0 Executive Summary

Background

C.F. Crozier & Associates Inc. (Crozier) was retained by Mattamy Homes to prepare a Traffic Impact Study in support of the Draft Plan of Subdivision application for a proposed residential development located at 6136-6588 Ninth Line in the City of Mississauga, Regional Municipality of Peel. The purpose of the study is to evaluate the transportation-related impacts of the proposed development on the boundary road network and to recommend any required mitigation measures, if warranted.

Per the Concept Plan prepared by Glen Schnarr & Associates Inc. (dated June 6, 2019), the development will be divided into two separate residential Draft Plan of Subdivisions to be built-out at separate times, with Draft Plan 1 (North Draft Plan) expected to be built-out by 2023 and Draft Plan 2 (South Draft Plan) expected to be built-out by 2026. The full build-out of the proposed development will consist of a combination of detached homes, condominium townhouse and apartment units with a total unit count ranging from 1039-2109 units.

The Traffic Impact Study analyzes the following intersections:

- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Derry Road West and Highway 407 West Ramp Terminal
- Derry Road West and Highway 407 East Ramp Terminal
- Derry Road West and Ninth Line
- Ninth Line and Doug Leavens Boulevard
- Ninth Line and Foxwood Avenue
- Ninth Line and Osprey Boulevard
- Ninth Line and future site connections
- Britannia Road West and Ninth Line
- Britannia Road West and Highway 407 West Ramp Terminal
- Britannia Road West and Highway 407 East Ramp Terminal

Existing Traffic Operations

The boundary road network is currently operating at acceptable levels of service during the weekday a.m. and p.m. peak hours, with the exception of the intersection of Britannia Road West and Ninth Line which is currently operating at capacity during the weekday a.m. peak hour. These operations are attributed to the eastbound through/right-turn and southbound through/right-turn movements operating near capacity. The eastbound and southbound through movements experience heavy volumes during the weekday a.m. peak hour. Additionally, the northbound through/right-turn movement is operating near capacity during the weekday p.m. peak hour. These operations are not uncommon at urban signalized arterial intersections.

The off-ramp approaches at the Highway 407 West Terminal at Derry Road West, and Highway 401 West Ramp Terminal at Winston Churchill Boulevard are operating near capacity during the p.m. peak hour. However, queue lengths at the off-ramp approaches of the ramp terminals do not extend to the freeway segments of Highway 407 nor Highway 401 and are thus contained within the off-ramp segments.

Overall, the boundary road network is currently operating at acceptable levels of service.

Future Background Conditions

The assumed build-out dates of the proposed development are 2023 (North Draft Plan) and 2026 (South Draft Plan). Accordingly, the following horizon years were analyzed: 2023 (North Draft Plan build-out), 2026 (full build-out), 2031 (five-year horizon) and 2036 (ten-year horizon). Growth rates from the Ninth Line Corridor Study Transportation Assessment prepared by MMM Group (July 2017) that were provided by the City of Mississauga and Ministry of Transportation of Ontario (MTO) were applied to this analysis.

The following background developments in the study area identified in the MMM study were accounted for under future background conditions.

- Erin Mills Development;
- 407 Transitway; and
- Emerging Land Use Concept on Ninth Line.

The following roadway improvements have been identified in the study area by the City of Mississauga, Region of Halton and the Region of Peel, as follows:

- Widening of Ninth Line from Eglinton Avenue West to Derry Road West to five-lanes, with a centre median or turn lane (details to be confirmed upon completion of municipal review);
- Widening of Winston Churchill Boulevard from Highway 401 to Steeles Avenue to six lanes;
- Widening of Derry Road West from Tremaine Road to Highway 407 to six lanes; and
- Widening of Britannia Road West from Tremaine Road to Highway 407 to six lanes.

Analysis of future background traffic operations indicates that the intersections of Derry Road West and Ninth Line, and Britannia Road West and Ninth Line are expected to operate at capacity with several movements operating above capacity. The MMM study also identified operational issues at the aforementioned intersections under 2041 future background conditions, and thus recommended that Derry Road West and Britannia Road West be widened from four lanes to six lanes from Highway 407 to Winston Churchill Boulevard. Accordingly, 2036 future background and total conditions were modelled under two scenarios: with and without the additional roadway improvements (the widening of Derry Road West and Britannia Road West in the study area).

Future Background Traffic Operations

The following intersections are expected to operate near or at capacity under 2036 future background conditions:

- Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
- Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
- Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future background conditions and with no roadway improvements to the aforementioned corridors within the City of Mississauga.

The widening of Derry Road West and Britannia Road West in the study area as recommended in the MMM study is expected to improve traffic operations under 2036 future background conditions so that all intersections are operating at overall acceptable levels of service.

Site Generated Traffic

The full build-out of the proposed development is expected to generate a total of 724 and 855 total two-way trips during the weekday a.m. and p.m. peak hours, respectively. Trips were assigned to the boundary road network using a combination of 2016 Transportation Tomorrow Survey (TTS) data, expected destinations, and existing travel patterns.

External Roadway Improvements

Analysis of external roadway improvements to support the North Draft Plan build-out for 2023 assuming the existing two-lane cross-section on Ninth Line indicates that an auxiliary northbound left-turn lane is **not** warranted at the Street "B" site connection to Ninth Line, and that an auxiliary northbound left-turn lane with a minimum of 15 metres of storage is required at the signalized site connection on Ninth Line at Doug Leavens Boulevard.

However, the existing runout lane at the south approach of Ninth Line and Doug Leavens Boulevard can be repurposed via pavement marking revisions to function as a northbound left-turn lane in the interim condition prior to the widening of Ninth Line. Therefore, no road widenings are required under 2023 future total conditions in the interim scenario.

Analysis of external roadway improvements under 2036 future total conditions has resulted in the following key findings:

- Traffic signals are **not** warranted at the proposed unsignalized site connections to Ninth Line;
- An auxiliary northbound left-turn lane is required at the Street "B" site connection to Ninth Line with a storage length of 25 metres, deceleration length of 95 metres, and taper between 85-95 metres (North Draft Plan build-out);
- An auxiliary northbound left-turn lane is required at the Street "K" site connection to Ninth Line with a storage length of 95 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out);
- An auxiliary northbound left-turn lane is required at the Street "O" site connection to Ninth Line at Foxwood Avenue with a storage length of 65 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out);
- An auxiliary northbound left-turn lane is required at the signalized connection on Ninth Line at Doug Leavens Boulevard with a storage length of 15 metres, deceleration length of 95 metres, and taper between 85-95 metres (North Draft Plan build-out);
- An auxiliary northbound left-turn lane is required at the signalized connection on Ninth Line at Osprey Boulevard with a storage length of 15 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out); and
- An auxiliary southbound right-turn lane should be provided on Ninth Line at the Street "O" site connection opposite Foxwood Avenue with a storage length of 30 metres, deceleration length between 150-195 metres, and taper of 80 metres (full build-out).

The configuration of the required auxiliary turn lanes on Ninth Line should be established at a later stage when details of the future Ninth Line cross-section and centre median are confirmed.

Site Access Configuration

The proposed site connections to Ninth Line should consist of one outbound left-turn lane and one outbound right-turn lane, with the right-turn lane at the site accesses opposite Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard operating as a shared through/right-turn lane.

Future Total Traffic Operations

The following intersections are expected to operate near or at capacity under 2036 future total conditions:

- Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
- Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
- Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are consistent with 2036 future background conditions, and are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future total conditions and with no background roadway improvements to the aforementioned corridors within the City of Mississauga.

The widening of Derry Road West and Britannia Road West in the study area as recommended in the MMM study is expected to improve traffic operations under 2036 future background conditions so that all intersections are operating at overall acceptable levels of service.

These operations are consistent with future background operations, indicating that the addition of site traffic to the boundary road network is not expected to significantly impact traffic operations. Therefore, the proposed development is supportable from a traffic operations perspective, with the implementation of the noted recommendations.

Safety Analysis

Analysis of safety components associated with the proposed development indicate the following:

- The proposed site connection minimum spacing of 280-300 metres on Ninth Line at the site frontage will reduce the potential for weaving or merging conflicts associated with traffic entering and exiting at the site accesses;
- The proposed site connection spacing exceeds recommended minimum intersection spacing guidelines set out in the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), June 2017;
- The available sight distance at the proposed site connections exceeds the minimum sight distance requirements set out in the TAC GDGCR;
- Roadway alignment of the boundary road network is not considered to be a traffic safety concern for the proposed development; and
- The available clear throat lengths for the internal roadways connecting to Ninth Line exceed the minimum recommended clear throat lengths set out in the TAC GDGCR.

Recommendations

The conclusions arising from this analysis have resulted in the following development-triggered recommendations to support the proposed development as outlined in **Table E1.**

Table E1: Recommended External Roadway Improvements

Location	Draft Plan	Improvement	Estimated Dimensions	Timing of Implementation
Ninth Line and Street "B"	North Draft Plan – 2023	Auxiliary northbound left-turn lane	25 metres storage 85-95 metres taper 95 metres deceleration	Ninth Line Road Widening
Ninth Line and Street "F" opposite Doug Leavens Boulevard	North Draft Plan – 2023	Auxiliary northbound left-turn lane	15 metres storage 85-95 metres taper 95 metres deceleration	Ninth Line Road Widening
Ninth Line and Street "K"	South Draft Plan – 2026	Auxiliary northbound left-turn lane	95 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection
Ninth Line and Street "O" opposite Foxwood Avenue	South Draft Plan – 2026	Auxiliary northbound left-turn lane	65 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection
		Auxiliary southbound right-turn lane	30 metres storage 80 metres taper 150-195 metres deceleration	
Ninth Line and Street "A" opposite Osprey Boulevard	South Draft Plan – 2026	Auxiliary northbound left-turn lane	15 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection

In addition to the external roadway improvements outlined above, the site connections to Ninth Line should be constructed so that one outbound left-turn lane and one outbound right-turn lane is provided, with the right-turn lane at the site accesses opposite Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard operating as a shared through/right-turn lane.

The configuration of the required auxiliary turn lanes on Ninth Line should be established at a later stage when details of the future Ninth Line cross-section and centre median are confirmed.

Appendix M contains conceptual drawings for the recommended external roadway improvements, as well as the recommended configurations of the proposed site connections to Ninth Line.

Conclusion

The analysis contained within this report was prepared using the Concept Plan prepared by Glen Schnarr & Associates Inc. (dated June 6, 2019). Any minor revisions to the development concept are not expected to affect the conclusions contained with this report.

In conclusion, the proposed development can be supported from a transportation operations and safety perspective, with the implementation of the noted recommendations.

2.0 Introduction

2.1 Background

C.F. Crozier & Associates Inc. (Crozier) was retained by Mattamy Homes to prepare a Traffic Impact Study in support of the Draft Plan of Subdivision application for a proposed residential development located at 6136-6588 Ninth Line in the City of Mississauga, Regional Municipality of Peel.

The subject property is located within the Ministry of Transportation of Ontario (MTO)'s permit control area, which includes the area within 395 metres of the centre point of a controlled-access highway and within 45 metres of the right-of-way. The subject property is bound by Highway 407 to the west, and is thus within the MTO's permit control area.

2.2 Development Proposal

Per the Concept Plan prepared by Glen Schnarr & Associates Inc. (dated June 6, 2019), the development will be divided into two separate residential Draft Plan of Subdivisions to be built-out at separate times. **Appendix A** contains the Concept Plan.

Table 1 outlines the proposed development statistics for both Draft Plans, as well as the expected year of build-out and proposed access connections.

Table 1: Development Proposal

Draft Plan of Subdivision	Unit Type	Total Units	Assumed Build-Out	Proposed Access Connections
1 (North Draft Plan)	Rear Lane Detached	30	2023	Street "B" at Ninth Line (new intersection) Street "F" at Ninth Line and Doug Leavens Boulevard
	Rear Lane Townhouse	67		
	Street Townhouse	101		
	Condominium Apartments	140-200		
	Total	**338-398**		
2 (South Draft Plan)	Rear Lane Townhouse	109	2026	Street "K" at Ninth Line (new intersection) Street "O" at Ninth Line and Foxwood Avenue Street "A" at Ninth Line and Osprey Boulevard [1]
	Street Townhouse	94		
	Condominium Duplex	148		
	Condominium Apartments	350-1360		
	Total	**701-1711**		
Full Build-Out	Rear Lane Detached	30	--	--
	Rear Lane Townhouse	176		
	Street Townhouse	195		
	Condominium Duplex	148		
	Condominium Apartments	490-1560		
	Total	**1039-2109**		

Note 1: Although not shown on Draft Plan, the proponent has confirmed a non-public road connection to Ninth Line and Osprey Boulevard.

2.3 Purpose and Scope

The purpose of the study is to evaluate the transportation-related impacts of the proposed development on the boundary road network and to recommend any required mitigation measures, if warranted.

The study reviews the following main aspects of the proposed development from a transportation engineering perspective:

- Existing, future background, and future total traffic operations on the boundary road network during the weekday a.m. and p.m. peak hours;
- Forecasted trip generation and distribution of the proposed development;
- Mitigation measures to support the proposed development, if required; and
- Transportation safety components, including: sight distance requirements at the site accesses, access spacing and restrictions, and general safety issues pertaining to road users.

The study has been completed in accordance with the following guidelines:

- Guidelines for the Preparation of Traffic Impact Studies (MTO, September 2014); and
- Traffic Impact Study Guidelines (City of Mississauga).

The study has also been completed in accordance with Terms of Reference established with City of Mississauga staff (City staff) and MTO staff. **Appendix B** contains the correspondence outlining the approved terms of reference.

A comprehensive Transportation Demand Management (TDM) Plan has been prepared and submitted separately to support the development application. The TDM Plan analyzes existing and future TDM opportunities to reduce single-occupant vehicle (SOV) trips to and from the site and promote alternate modes of transportation.

3.0 Existing Conditions

3.1 Development Lands

The subject property is located in a residential neighbourhood and is bound by a Union Gas Limited building to the north, an existing church to the south, Ninth Line to the east, and Parkland Belt lands and Highway 407 Express Toll Route (ETR) to the west. The subject property is zoned as D "Development" Lands per the City of Mississauga's Zoning By-Law.

The Draft Plans make allowance for the future bus-rapid transit (BRT) 407 Transitway planned by the MTO will span through the subject property running parallel to Highway 407. The 407 Transitway is currently proceeding through the environmental assessment process. While the exact alignment of the transitway is still under evaluation by the MTO, the Draft Plans reflect the more restrictive alignment Option 2. The 407 Transitway is discussed in more detail in **Section 4.3.**

A key map illustrating the location of the subject property is included on the Concept Plan included as **Appendix A**.

3.2 Study Intersections

The Traffic Impact Study analyzes the following intersections:

- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Derry Road West and Highway 407 West Ramp Terminal
- Derry Road West and Highway 407 East Ramp Terminal
- Derry Road West and Ninth Line
- Ninth Line and Doug Leavens Boulevard
- Ninth Line and Foxwood Avenue
- Ninth Line and Osprey Boulevard
- Ninth Line and future site connections
- Britannia Road West and Ninth Line
- Britannia Road West and Highway 407 West Ramp Terminal
- Britannia Road West and Highway 407 East Ramp Terminal

3.3 Boundary Road Network

The provincial and regional boundary road network at the site frontage is described in **Table 2**.

Table 2: Boundary Road Network – Provincial and Regional Roads

Feature	Roadway			
	Highway 401	**Highway 407**	**Derry Road West**	**Britannia Road West**
Direction	Two-way (East-West)	Two-way (North-South) [1]	Two-way (North-South)	Two-way (North-South) [1]
Classification	Provincial Freeway	Provincial Freeway – Express Toll Route (ETR)	Regional Arterial (Regional Road 5)	Regional Arterial (Regional Road 3)
Jurisdiction	MTO	407 ETR	Region of Peel	Region of Peel
Speed Limit	100 km/h *Off-Ramp advisory speed is 60 km/h*	100 km/h *Off-Ramp advisory speed is 60 km/h*	60 km/h	80 km/h
Number of lanes	Six	Six	Four	Four
Median type	Jersey Barrier (typical freeway separation)	Jersey Barrier (typical freeway separation)	Raised concrete median (west of Ninth Line) Centre lane (east of Ninth Line)	Raised concrete median (west of Ninth Line) Centre lane (east of Ninth Line)

Note 1: While Highway 407 primarily spans east-west, the segment parallel to Ninth Line spans north-south.

The municipal boundary road network at the site frontage is described in **Table 3**.

Table 3: Boundary Road Network – City of Mississauga Roads

Feature	Roadway		
	Winston Churchill Boulevard	**Ninth Line**	**Doug Leavens Boulevard Foxwood Avenue Osprey Boulevard**
Direction	Two-way (North-South)	Two-way (North-South)	Two-way (East-West)
Classification	Arterial	Arterial	Minor Collector
Jurisdiction	City of Mississauga [1]	City of Mississauga	City of Mississauga
Surrounding Uses	Commercial	Residential	Residential
Speed Limit	60 km/h	70 km/h	50 km/h assumed [1]
Number of lanes	Four (north of Highway 401 overpass) Six (south of Highway 401 overpass)	Two	Two
Median type	Raised centre median	None – north of Foxwood Avenue Centre lane – south of Foxwood Avenue	None

Note 1: Winston Churchill Boulevard is under the jurisdiction of the Region of Peel north of Highway 401 through its span in the City of Brampton.
Note 2: Speed limit of 50 km/h assumed per municipal regulation.

Table 4 outlines the existing traffic control, configurations, and pedestrian crossing provisions at the study intersections on the boundary road network.

Table 4: Boundary Road Network – Study Intersections

Intersection	Control	Approaches	Major Street	Auxiliary Turn Lanes	Pedestrian Crossing
Winston Churchill Boulevard and 401 West Ramp Terminal	Signal Semi-Actuated	3	Winston Churchill Boulevard	WBL WBR	None
Winston Churchill Boulevard and 401 East Ramp Terminal	Signal Semi-Actuated	3	Winston Churchill Boulevard	EBL EBR	None
Derry Road West and 407 South Ramp Terminal	Signal Semi-Actuated	3	Derry Road West	SBL SBR	None
Derry Road West and 407 North Ramp Terminal	Signal Semi-Actuated	3	Derry Road West	NBL NBR	None
Derry Road West and Ninth Line	Signal Semi-Actuated	4	Derry Road West	EBL WBL NBL NBR SBL SBR	All approaches (crossings delineated by ladder markings)
Ninth Line and Doug Leavens Boulevard	Signal Semi-Actuated	3	Ninth Line	WBL WBR NBR SBL	All approaches (crossings delineated by edge markings)
Ninth Line and Foxwood Avenue	Stop Controlled (Minor Street)	3	Ninth Line	WBL [1] WBR [1] SBL	East approach
Ninth Line and Osprey Boulevard	Signal Semi-Actuated	3	Ninth Line	WBL WBR NBR SBL	All approaches (crossings delineated by edge markings)
Britannia Road West and Ninth Line	Signal Semi-Actuated	4	Britannia Road West	EBL WBL WBR NBL SBL	All approaches (crossings delineated by ladder markings)
Britannia Road West and 407 South Ramp Terminal	Signal Semi-Actuated	3	Britannia Road West	SBL SBR	None
Britannia Road West and 407 North Ramp Terminal	Signal Semi-Actuated	3	Britannia Road West	NBL NBR	None

Note 1: Although not marked, Foxwood Avenue is wide enough to allow for exclusive westbound left-turns and right-turns.

Figure 1 illustrates the existing boundary road network, including lane configurations, storage lengths, and intersection control.

3.4 Transit Operations

There are several MiWay Transit and GO Transit bus routes that operate in the surrounding area of the subject property. **Table 5** outlines the existing transit routes, direction, days of operation, peak hour headways, and the location of bus stops in the study area.

Table 5: Existing Transit Services

MiWay Transit					
Route	**Start and End Points**	**Span near study area**	**Days of Operation**	**Peak Hour Headways (min)**	**Bus Stop(s) near study area**
32 Lisgar GO	Lisgar GO station to Tenth Line and Aquitaine Avenue	Lisgar Drive (north of Doug Leavens Boulevard)	Monday - Friday Peak Periods only	15-25 min	Derry Road West at Lisgar Drive Lisgar Drive at Doug Leavens Boulevard
39 Britannia	Meadowvale Town Centre to Renforth Station	Derry Road West (east of Lisgar Drive) Lisgar Drive Osprey Boulevard (west of Lisgar Drive) Ninth Line (south of Osprey Boulevard) Britannia Road West (east of Ninth Line)	Monday - Sunday	20-25 min	Britannia Road West at Ninth Line Ninth Line at Parkgate Drive Ninth Line at Osprey Boulevard Lisgar Drive at Osprey Boulevard Lisgar Drive at Foxwood Avenue Lisgar Drive at Doug Leavens Boulevard Lisgar Drive at Derry Road West
90 Terragar-Copenhagen Loop	Meadowvale Town Centre to Rosehurst Drive and Terragar Boulevard	Derry Road West (east of Lisgar Drive)	Monday - Saturday	20-40 – A.M. Peak 9-26 – P.M. Peak	Derry Road West east of Lisgar Drive
GO Transit					
Route	**Start and End Points**	**Span near study area**	**Days of Operation**	**Peak Hour Headways (min)**	**Bus Stop(s) near study area**
21 Milton	Milton to Toronto	Derry Road West (Branch A, B, N)	Monday - Sunday	Varies from 10-60 min	Derry Road West at Ninth Line Derry Road West, west of Lisgar Drive
27 Milton/North York	Milton to North York	Derry Road West (Branch A, C)	Monday - Sunday	Varies from 15-35 min	Derry Road West at Ninth Line Derry Road West, west of Lisgar Drive
48 407 West	University of Guelph to Toronto	Derry Road West (Branch A, B)	Monday - Sunday	Varies from 20-30 min	Derry Road West at Ninth Line Derry Road West, west of Lisgar Drive

As outlined above, there are several routes that operate within the surrounding area that provide connectivity to major transit terminals in the area such as Meadowvale Town Centre, Meadowvale GO Station, and Lisgar GO Station. These transit terminals provide connectivity to the rest of the Greater Toronto Area (GTA) via other bus routes and the Milton GO Train line to Union Station in Toronto.

The nearest bus stops in the study area are primarily located on Lisgar Drive which runs parallel to Ninth Line. These bus stops are located within 350 metres of Ninth Line, thus being walkable from Ninth Line via the existing pedestrian sidewalks on the local and collector roadways connecting Ninth Line to Lisgar Drive.

Therefore, the existing transit services in the study area are sufficient to promote transit as a viable mode of transportation.

The boundary road network in **Figure 1** illustrates the existing bus stop locations in the study area, including Lisgar Drive. **Appendix C** contains relevant transit information.

3.5 Active Transportation Network

The existing active transportation facilities on the boundary road network are described in **Table 6**.

Table 6: Active Transportation Network

Roadway	Pedestrian Facilities	Separation from Roadway	Cycling Facilities	Separation from Roadway
Winston Churchill Boulevard	1.5 metre concrete sidewalk (Highway 401 overpass, both sides; south of East Ramp Terminal, west side)	None	None	N/A
Derry Road West	1.5 metre concrete sidewalk (Highway 407 overpass, both sides)	None	Multi-use trail east of Ninth Line, north side	Grass Boulevard
Ninth Line	1.5 metre concrete sidewalk (between Osprey Boulevard and multi-use trail, east side)	None	Multi-use trail north of Derry Road West, east side; south of Osprey Boulevard, east side) [1]	Grass Boulevard
Britannia Road West	1.5 metre concrete sidewalk (east of Ninth Line, south side)	Grass Boulevard	Multi-use trail east of Ninth Line, north side	Grass Boulevard
Doug Leavens Boulevard	1.5 metre concrete sidewalk (both sides)	Grass Boulevard	None	N/A
Foxwood Avenue	1.5 metre concrete sidewalk (both sides)	Grass Boulevard	None	N/A
Osprey Boulevard	1.5 metre concrete sidewalk (both sides)	Grass Boulevard	None	N/A

Note 1: Segment of multi-use trail south of Osprey Boulevard is part of the Lisgar Meadow Brook Trail.

It is noted that the Lisgar Meadow Brook Trail runs north-south about 700 metres east of Ninth Line. Thus, while not located on the immediate boundary road network, the provision of a multi-use trail provides active transportation opportunities relatively close to the subject property.

The boundary road network in **Figure 1** illustrates the existing pedestrian and cycling facilities in the study area.

3.6 Traffic Data

Turning movement counts were conducted by Spectrum Traffic Data Inc. staff at the study intersections on Tuesday April 30, 2019 between 6:00 a.m. – 10:00 a.m. and 3:00 p.m. – 7:00 p.m. These time periods are reflective of commuter peak hours and thus were considered appropriate for traffic analysis of the proposed development.

Signal timing plans for the Highway 401 ramp terminals at Winston Churchill Boulevard were provided by the MTO. Signal timing plans for the regional intersections of Ninth Line and Derry Road West, and Ninth Line and Britannia Road West were provided by the Region. Signal timing plans for the municipal intersections of Ninth Line and Doug Leavens Boulevard, and Ninth Line and Osprey Boulevard were provided by the City. Signal timing plans for the Highway 407 ramp terminals at Derry Road West and Britannia Road West were requested, but 407 ETR has not provided the signal timings at the time of this analysis.

The traffic count data and signal timing data are contained in **Appendix D**. **Figure 2** illustrates the 2019 existing traffic volumes that were recorded.

3.7 Traffic Modelling

The boundary road network was modelled in Synchro 9.2 using existing roadway geometrics, collected traffic data and signal timings from the provided timing plans.

As 407 ETR did not provide signal timing plans for the Highway 407 ramp terminals, signal timings were estimated by viewing the camera footage collected during the traffic counts.

The results for signalized intersection operations were derived from Synchro. The results for unsignalized intersection operations were derived using HCM2000 methodology. 95th percentile queue lengths were derived from Synchro. The Level of Service (LOS) definitions for signalized and unsignalized intersections are included in **Appendix E**.

The intersection of Foxwood Avenue and Ninth Line was modelled with an exclusive outbound left-turn and right-turn lane despite the movements not being designated separately by pavement markings nor signage. The width of the roadway is wide enough that left-turning vehicles and right-turning vehicles can wait for a gap in traffic without queuing in front of each other, thus operating similarly to an approach with exclusive left and right-turn lanes. This operation was confirmed through review of camera footage.

3.7.1. City of Mississauga Modelling Guidelines

The intersections under the jurisdiction of the City of Mississauga were modelled in Synchro 9.2 in conformance with the modelling guidelines per the City of Mississauga's "Traffic Impact Study Guidelines." **Table 7** summarizes the Synchro modelling parameters set out by the City's guidelines.

Table 7: City of Mississauga Synchro Modelling Parameters

Parameter	Value
Ideal (base) saturation flow rate	Protected left-turn: 1,860 veh/hr/lane Exclusive through: 1,900 veh/hr/lane Exclusive right-turn: 1,640 veh/hr/lane
Lost Time [1]	Protected left-turn: 1.0 s Back-to-back left-turns: 1.0 s Main Phase: 5.0 s
Peak Hour Factor	As calculated
Lane widths	As measured

Note 1: Lost time refers to the total lost time for the respective phase (intergreen minus lost time adjustment). Lost time adjustments were calculated so that the total lost time for the respective phases are equal to the values set out in the City's guidelines.

The modelling guidelines outlined above were applied to the following intersections:

- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Winston Churchill Boulevard and Highway 401 West Ramp Terminal
- Ninth Line and Doug Leavens Boulevard
- Ninth Line and Foxwood Avenue
- Ninth Line and Osprey Boulevard

The off-ramp approaches were modelled with an ideal (base) saturation flow rate of 1,900 veh/hr/lane (similar to through movements) given that the approaches operate with no opposing traffic nor pedestrian interference.

Intersection analysis was conducted utilizing peak hour factors (PHFs) as calculated for each intersection during each time period

3.7.2. Region of Peel Modelling Guidelines

The intersections under the jurisdiction of the Region of Peel were modelled in Synchro 9.2 in conformance with the modelling guidelines per the Region of Peel's "Regional Guidelines for Using Synchro Version 7.73 Rev 8." **Table 9** summarizes the Synchro modelling parameters set out by the Region's guidelines.

Table 8: Region of Peel Synchro Modelling Parameters

Parameter	Value
Ideal (base) saturation flow rate	1,900 veh/hr/lane
Lost Time	No parameters specified
Peak Hour Factor	1.00 for all intersection movements
Lane width	3.7 metres for through and shared through/turn lanes 3.5 metres for exclusive turn lanes

The modelling guidelines outlined above were applied to the following intersections:

- Derry Road West and Highway 407 West Ramp Terminal
- Derry Road West and Highway 407 East Ramp Terminal
- Derry Road West and Ninth Line
- Ninth Line and Britannia Road West
- Britannia Road West and Highway 407 West Ramp Terminal
- Britannia Road West and Highway 407 East Ramp Terminal

3.7.3. Critical Volume-To-Capacity Thresholds

The MTO considers a movement to be critical when the volume-to-capacity exceeds 0.75 for an off-ramp approach at a ramp terminal or exceeds 0.85 for all other movements at an intersection under MTO jurisdiction. The Highway 401 and Highway 407 ramp terminals were evaluated using these thresholds.

The Region's guidelines set out thresholds for critical volume-to-capacity ratios for through/shared through movements, and for exclusive turning movements, with thresholds of 0.90 and 1.00 for a through/shared through or exclusive turning movement, respectively. The intersections of Ninth Line and Derry Road West, and Ninth Line and Britannia Road West were evaluated using these thresholds.

The City of Mississauga consider a movement to be critical when the volume-to-capacity exceeds 0.85 for any intersection movement. The intersections of Ninth Line and Doug Leavens Boulevard, Ninth Line and Foxwood Avenue, and Ninth Line and Osprey Boulevard were evaluated using this threshold.

3.7.4. Left-Turn on Intergreen Adjustments

In addition to the City and Region's modelling guidelines, adjustments were applied to account for left-turn on intergreens.

At intersections with high through volumes, left-turning vehicles waiting for gaps in the opposing traffic stream during a permissive phase may only be able maneuver through the intersection during the intergreen period. This behavior is typically observed at intersections approaching capacity, and was confirmed by viewing the camera footage collected during the traffic counts.

In accounting for the increased capacity of left-turning vehicles at the intersections in the boundary road network, the Canadian Capacity Guide recommends that up to two passenger cars can be reasonably discharged during each intergreen period for permissive phases.

The number of vehicles that are expected to discharge per intergreen period is determined by the following formula on page 3-20 in the Canadian Capacity Guide:

$$Q_{LTOI} = n * X_{LTOI},$$

Where;
Q_{LTOI} = left-turn flow on intergreen (pcu/hr)
n = number of cycles per hour
X_{LTOI} = average number of left-turn passenger car units per intergreen period (2 assumed)

Left turning volumes were analyzed with a reduction in volumes when movements were found to experience a volume-to-capacity ratio in excess of 1.00 under existing, future background or future

total scenarios. This adjustment was not applied to left-turn movements with no opposing traffic volumes (e.g. the Highway 401 off-ramp terminals on Winston Churchill Boulevard).

These modifications are in conformance with standard industry practice.

3.7.5. Ramp Terminal Right-Turn on Red Adjustments

The Highway 401 off-ramp terminals at Winston Churchill Boulevard consist of an exclusive left-turn lane, a shared left-turn/right-turn lane, and an exclusive right-turn lane. The ramp terminals were modelled with these existing geometrics. However, it was observed from the camera footage collected at the Highway 401 ramp terminals during the traffic counts that most of the right-turn movements are occurring in the exclusive right-turn curb lane, and that the shared left-turn/right-turn lane primarily consists of left-turn movements. Therefore, the Synchro modelling of the off-ramp approaches was calibrated to reflect observed operations.

The observed operations suggest that the actual Saturation Flow Rate for Right-turn on Reds (RTORs) is higher than the default calculated Saturation Flow Rate for RTORs in Synchro.

The following formula from the Highway Capacity Manual (HCM) is used to calculate Saturation Flow Rate for ROTRs:

$$sRTOR = vRTOR * C/r$$

Where;
sRTOR = Saturation Flow Rate for RTOR (veh/hr)
vRTOR = observed RTOR volume (veh/hr)
C = cycle length
R = red time

For the westbound ramp terminal, the existing cycle length is 160 seconds (resulting in 22 cycles per hour) and the total red time for the off-ramp approach is 101 seconds during the critical weekday p.m. peak period. Observations of the camera footage indicate an average of approximately 10 vehicles per cycle conducting a RTOR movement, primarily in the curb lane (which is equivalent to approximately 220 vehicles per hour). Using the formula above, the Saturation Flow Rate for RTORs would be approximately 349 vehicles per hour which is higher than the default calculated Saturation Flow Rate of 68 vehicles per hour for RTORs.

For the eastbound ramp terminal, the existing cycle length is 160 seconds (resulting in 22 cycles per hour) and the total red time for the off-ramp approach is 118 seconds during the critical weekday p.m. peak period. Observations of the camera footage also indicate an average of approximately 5 vehicles per cycle conducting a RTOR movement, primarily in the curb lane (which is equivalent to approximately 110 vehicles per hour). Using the formula above, the Saturation Flow Rate for RTORs would be approximately 149 vehicles per hour which is higher than the default calculated Saturation Flow Rate of 46 vehicles per hour for RTORs.

Accordingly, this adjustment was applied to the Highway 401 ramp terminals at Winston Churchill Boulevard during the weekday p.m. peak period for all scenarios. Where signal timings were optimized under future background and total conditions, the RTOR Saturation Flow Rate was re-calculated using the red time from the optimized signal timings.

3.8 Intersection Operations

The existing intersection operations at the study intersections were analyzed using the existing traffic volumes illustrated in **Figure 2.** Detailed capacity analysis worksheets are included in **Appendix F**.

Table 9 outlines the 2019 existing traffic operations.

Table 9: 2019 Existing Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Derry Road West and 407 North Ramp Terminal	Signal	A.M.	A	6.3 s	0.68 (NBR)	None
		P.M.	A	6.4 s	0.63 (NBR)	None
Derry Road West and 407 South Ramp Terminal	Signal	A.M.	A	4.2 s	0.50 (EBT)	None
		P.M.	C	23.3 s	0.86 (SBR)	129.9 m > 120 m (SBR)
Derry Road West and Ninth Line	Signal	A.M.	D	37.0 s	0.86 (SBT)	93.7 m > 75 m (EBL)
		P.M.	C	34.2 s	0.84 (SBT)	None
Ninth Line and Doug Leavens Boulevard	Signal	A.M.	B	10.0 s	0.61 (NBT)	None
		P.M.	A	8.3 s	0.53 (SBT)	None
Ninth Line and Foxwood Avenue	Stop (Minor)	A.M.	C	16.3 s	0.16 (WBR)	None
		P.M.	C	17.3 s	0.08 (WBL)	None
Ninth Line and Osprey Boulevard	Signal	A.M.	B	10.4 s	0.55 (NBT)	31.4 m > 15 m (WBL)
		P.M.	B	10.0 s	0.65 (NBT)	19.9 m > 15 m (WBL)
Britannia Road West and Ninth Line	Signal	A.M.	E	57.0 s	0.99 (EBTR) 0.95 (SBTR)	None
		P.M.	D	49.3 s	0.97 (NBTR)	None
Britannia Road West and 407 North Ramp Terminal	Signal	A.M.	A	7.3 s	0.73 (NBR)	None
		P.M.	A	5.6 s	0.54 (NBR)	None
Britannia Road West and 407 South Ramp Terminal	Signal	A.M.	A	5.0 s	0.40 (SBL)	None
		P.M.	B	11.6 s	0.69 (SBL)	None
Winston Churchill Boulevard and 401 East Ramp Terminal	Signal	A.M.	B	13.6 s	0.63 (EBL)	None
		P.M.	B	16.2 s	0.70 (EBL)	None
Winston Churchill Boulevard and 401 West Ramp Terminal	Signal	A.M.	B	12.5 s	0.68 (WBL)	None
		P.M.	C	28.3 s	0.84 (WBL)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds. All v/c ratios that exceed the critical thresholds outlined in Section 3.7 are outlined and highlighted.

Note 3: 95th percentile queue lengths which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

The boundary road network is currently operating at LOS "D" or better during the weekday a.m. and p.m. peak hours, with the exception of the intersection of Britannia Road West and Ninth Line which is currently operating at LOS "E" during the weekday a.m. peak hour. These operations are attributed to the eastbound through/right-turn and southbound through/right-turn movements operating near capacity. The eastbound and southbound through movements experience heavy volumes during the weekday a.m. peak hour. Additionally, the northbound through/right-turn movement is operating near capacity during the weekday p.m. peak hour. These operations are not uncommon at urban signalized arterial intersections.

The 95th percentile queue length for the northbound left-turn movement at the intersection of Britannia Road West and Ninth Line currently extends beyond the designated storage length during the weekday a.m. and p.m. peak hours, but were not observed to interfere with through traffic on Ninth Line. This is because Ninth Line has a painted centre median area that allows vehicles to queue beyond the designated storage length. Queues were observed to generally dissipate within one cycle length, which is reflected in the Synchro traffic operations as this movement is not operating near capacity.

The 95th percentile queue length for the eastbound left-turn movement at the intersection of Derry Road West and Ninth Line currently extends beyond the designated storage length during the weekday a.m. peak hour, but is contained within the left-turn lane taper. Queues were observed to generally dissipate within one cycle length, which is reflected in the Synchro traffic operations as these movements are not operating near capacity. Additionally, the eastbound left-turn movement is currently operating as a permissive turn type during the weekday a.m. peak hour. If the movement were to operate with a protected-permissive turn type, the 95th percentile queue length is expected to decrease.

The 95th percentile queue length for the westbound left-turn movement at the intersection of Ninth Line and Osprey Boulevard currently extends beyond the designated storage length during the weekday a.m. and p.m. peak hours. However, the road width of Osprey Boulevard east of the westbound left-turn lane was observed to allow for separation of queued westbound left-turn vehicles from westbound right-turn vehicles.

The southbound right-turn movement at the Highway 407 West Ramp Terminal at Derry Road West is operating above the MTO critical volume-to-capacity ratio of 0.75 during the weekday p.m. peak hour. This movement experiences heavy southbound right-turn volumes during the weekday p.m. peak hour. However, the existing queue lengths at the off-ramp approaches of the ramp terminals do not extend to the freeway segment of Highway 407 and are thus contained within the off-ramp segments. The distance from the gore area of the freeway segment to the stop bar at the ramp terminal is approximately 500 metres.

The westbound left-turn movement at the Highway 401 West Ramp Terminal at Winston Churchill Boulevard is operating above the MTO critical volume-to-capacity ratio of 0.75 during the weekday p.m. peak hour. The off-ramp approach experiences heavy volumes exiting Highway 401 westbound during the weekday p.m. peak hour. However, Winston Churchill Boulevard is planned to be widened to six lanes in the short-term horizon, which is expected to increase intersection capacity and improve traffic operations. Additionally, the existing queue lengths at the off-ramp approaches of the ramp terminals do not extend to the freeway segment of Highway 401 and are thus contained within the off-ramp segments. The distance from the gore area of the freeway segment to the stop bar at the ramp terminal is approximately 560 metres.

Overall, the boundary road network is currently operating at acceptable levels of service.

4.0 Future Background Conditions

4.1 Horizon Years

The north Draft Plan is expected to be built-out by 2023 and the south Draft Plan is expected to be built-out by 2026. In addition to analysis of the horizon year for each Draft Plan build-out, the MTO's guidelines require analysis of the five-year and ten-year horizons beyond the estimated year of full build-out (2026). Therefore, the following horizon years were analyzed: 2023 (North Draft Plan build-out), 2026 (full build-out), 2031 (five-year horizon) and 2036 (ten-year horizon).

4.2 Growth Rate

4.2.1. City and Regional Arterial Roads

The Ninth Line Corridor Study Transportation Assessment prepared by MMM Group (July 2017, herein referred to as the "MMM study") for the City of Mississauga forecasted future background traffic volumes on arterial roads in the surrounding area using compounded growth rates provided by City staff from the City's EMME model projections. The City provided growth rates for Ninth Line, Winston Churchill Boulevard, Derry Road West and Britannia Road West.

Appendix G contains excerpts from the MMM study.

Table 10 outlines the growth rates on the boundary road network.

Table 10: Boundary Road Network Growth Rates

Street	Winston Churchill Boulevard	
Direction	Northbound	Southbound
A.M. Peak Hour	1.15%	2.76%
P.M. Peak Hour	3.37%	1.30%
Street	**Derry Road West**	
Direction	Eastbound	Westbound
A.M. Peak Hour	1.94%	2.04%
P.M. Peak Hour	1.67%	1.45%
Street	**Britannia Road West**	
Direction	Eastbound	Westbound
A.M. Peak Hour	2.71%	2.04%
P.M. Peak Hour	1.85%	2.39%
Street	**Ninth Line**	
Direction	Northbound	Southbound
A.M. Peak Hour	1.00% [1] [2]	0.50% [2]
P.M. Peak Hour	0.50% [1] [2]	1.05% [2]

Note 1: For analysis, a growth rate of 0.5% compounded annually was applied in lieu of a zero percent growth rate.
Note 2: A growth rate of 0.5% compounded annually was applied to movements entering and exiting Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard (see Section 4.2.2).

4.2.2. City Collector Roads

At the Ninth Line intersections of Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard, the growth rates outlined in **Table 10** were applied to through movements only. A growth rate of 0.5% compounded annually was applied to movements entering and exiting the local roads, as the surrounding residential neighbourhood east of Ninth Line is fully built-out and thus would not be expected to experience significant background traffic growth.

4.2.3. Highway 401 and 407 Ramp Terminals

As stated in the MMM study, the MTO instructed MMM to apply a growth rate of 2% compounded annually at the off-ramp approaches at ramp terminals. For consistency, this growth rate was applied to the off-ramp approaches at the Highway 401 and Highway 407 ramp terminals in this analysis.

4.3 Background Developments

Background developments were identified in the study area from the MMM study, and thus were accounted for under future background conditions. The developments are outlined in **Table 11.**

Table 11: Background Developments

Development	Location	Development Proposal	Statistics
Erin Mills Development	North-east quadrant of Highway 403 and Highway 407	Industrial Park including retail and office uses	112,630 sq. m of industrial park 6,762 sq. m of retail 8,074 sq. m of office
407 Transitway	Future stations in study area: Britannia Road and Derry Road	Provincial transit system with exclusive right-of-way parallel to Highway 407; includes running way, stations, platforms, parking, and passenger pick-up and drop-off facilities.	Britannia Station – 640 parking spaces Derry Station – 2,160 spaces (interim); 3,360 spaces (ultimate)
Emerging Land Use Concept	Ninth Line (west side) from Highway 403 to Highway 401	Greenfield community consisting of residential, commercial retail, general office and general light industrial uses divided into seven zones along Ninth Line.	3,543 residential units 5,467 sq. ft of retail 40,009 sq. ft of general office 296,191 sq. ft of general light industrial

The MMM study forecasts traffic on the boundary road network generated by the developments outlined above. The background development traffic added to the boundary road network in the MMM study was applied to this analysis. **Appendix G** contains excerpts from the MMM study on the background developments.

4.3.1. Timing of Developments

The timing of the Erin Mills development is unknown; thus, this development was accounted for during all horizon years.

The timing of the 407 Transitway completion in the study area is unknown at this time, as the MTO is in the process of reviewing the design alternatives from the "Parkway Belt West Plan/407 Transitway EA study." However, the Transit Project Assessment Process (TPAP) is expected to be completed by the end of 2020, thus completing approvals for the entire 407 Transitway corridor. Thus, it can be assumed that the 407 Transitway segment within the study area will be completed by the 2023 horizon year. Traffic generated by the Britannia and Derry stations was accounted for during all horizon years.

The Emerging Land Use Concept for Ninth Line aims to achieve the City's population and employment growth targets by 2031. Per the "Ninth Line Lands Municipal Comprehensive Review" prepared for Peel Region by Macaulay Shiomi Lowson Ltd. (May 2017), it is anticipated that the Ninth Line lands will need to be developed prior to 2031.

While the exact timing of the Ninth Line lands build-out is unknown, it was assumed that the lands will be partially built-out by both 2023 and 2026 to accelerate the City's growth targets. It was assumed that approximately 25% of the Emerging Land Use Concept will be build-out by 2023, approximately 50% of the Emerging Land Use Concept will be built-out by 2026, and full build-out for 2031 and 2036.

4.3.2. Development Traffic

The MMM study forecasted traffic for the Emerging Land Use Concept for various non-auto modal split scenarios: 5%, 10%, 15%, and 20%. For the purposes of conservative analysis, the site traffic volumes for the lowest non-auto modal split scenario (5%) was applied to this analysis.

Zone "5" of the Emerging Land Use Concept spans from Britannia Road West to Derry Road West, and includes the subject property (see **Appendix G** for excerpts from the MMM study). The background site traffic associated with the area of Zone "5" that overlaps the subject property was removed from the site accesses to the Zone "5" property: Doug Leavens Boulevard and Osprey Boulevard. However, for the purposes of conservative analysis, these site traffic volumes were not subtracted on the greater boundary road network.

Figure 3 illustrates the background traffic associated with the Erin Mills development. **Figure 4** illustrates the background traffic associated with the Britannia Road and Derry Road stations of the 407 Transitway initiative. **Figure 5** illustrates the 2023 background traffic associated with the assumed 25% build-out of the Emerging Land Use Concept. **Figure 6** illustrates the 2026 background traffic associated with the assumed 50% build-out of the Emerging Land Use Concept. **Figure 7** illustrates the 2031 and 2036 background traffic associated with the full build-out of the Emerging Land Use Concept.

4.4 Planned Roadway Improvements

The City of Mississauga will be undertaking a Municipal Class Environmental Assessment for the widening of Ninth Line from Eglinton Avenue West to Derry Road West. The study is scheduled to begin early 2020, with an anticipated construction date of 2023 as advised by City staff (see **Appendix B** for correspondence).

Details regarding the widening are unknown at this time. However, it is assumed that Ninth Line will be widened from two lanes to five lanes (four travel lanes and a centre turn lane or centre median), and active transportation facilities such as bike lanes and a continuous sidewalk or multi-use trail. These assumptions are supported by the conceptual design prepared by CIMA+ for the segment of Ninth Line south of the study area and within the Region of Halton (see **Appendix H**).

It is assumed that auxiliary right-turn lanes will be implemented on Ninth Line at the north and south approaches of the intersection of Britannia Road West given that these movements are expected to increase in volumes with future traffic growth and background development traffic.

In addition to the widening of Ninth Line, other roadway improvements have been identified in the study area by the Region of Halton and the Region of Peel.

Table 12 outlines the future roadway improvements in the study area.

Table 12: Planned Roadway Improvements in Study Area

Roadway	Segment or Intersection	Jurisdiction	Improvement	Anticipated Year of Completion
Ninth Line	Eglinton Avenue West to Derry Road West	City of Mississauga	Widen to five lanes and provide urban cross-section	2023 [1]
Winston Churchill Boulevard	Highway 401 to Steeles Avenue	Region of Peel	Widen to six lanes and provide urban cross-section	2021 [2]
Derry Road West	Tremaine Road to Highway 407	Region of Halton	Widen to six lanes and provide urban cross-section	2028 - 2031 [3]
Britannia Road West	Tremaine Road to Highway 407	Region of Halton	Widen to six lanes and provide urban cross-section	2022 [4]

Note 1: Estimate provided by City staff.
Note 2: Source: Peel Long Range Transportation Master Plan (Update 2012).
Note 3: Source: Halton Region Budget and Business Plan, 2019.
Note 4: Source:https://www.halton.ca/For-Residents/Roads-Construction/Construction-Projects/Britannia-Road-Corridor-Improvements

These roadway improvements were also accounted for in the MMM study. The Ninth Line, Winston Churchill Boulevard and Britannia Road West improvements were accounted for during the 2026, 2031 and 2036 horizon years. However, given the uncertainty of the timing of the Derry Road West improvements, the widening was accounted for during the 2031 and 2036 horizon years. **Appendix I** contains excerpts on future roadway improvement information from the noted sources above.

4.5 Additional Roadway Improvements

Analysis of 2031 and 2036 future background traffic operations indicates that the intersections of Derry Road West and Ninth Line, and Britannia Road West and Ninth Line are expected to operate at capacity with several movements operating above capacity. The MMM study also identified operational issues at the aforementioned intersections under 2041 future background conditions. The 2031 and 2036 horizon years account for the full operation of the 407 Transitway and the full build-out of the Emerging Land Use Concept.

The MMM study recommended that Derry Road West and Britannia Road West be widened from four lanes to six lanes from Highway 407 to Winston Churchill Boulevard. Their justification was that the City's EMME forecasted growth rates for Derry Road West and Britannia Road West reflect the widening of the roadways within the Region of Halton and resultant increased through traffic on the corridors.

Thus, the intersections on Derry Road West and Britannia Road West were modelled under 2036 future background conditions under two scenarios: with and without the widening of Derry Road West and Britannia Road West in the study area. It is assumed that auxiliary right-turn lanes would be implemented on both Derry Road West and Britannia Road West at the intersection of Ninth Line as part of a future road widening.

4.6 Intersection Modelling

The following existing permissive left-turn movements were modelled as protected-permissive under future background conditions:

- Eastbound left-turn at Derry Road West and Ninth Line (weekday a.m. peak);
- Westbound left-turn at Derry Road West and Ninth Line (weekday p.m. peak);
- Southbound left-turn at Derry Road West and Ninth Line (weekday a.m. and p.m. peaks);
- Westbound left-turn at Britannia Road West and Ninth Line (weekday p.m. peak); and
- Southbound left-turn at Ninth Line and Doug Leavens Boulevard (weekday a.m. and p.m. peaks).

The signalized intersections of Ninth Line and Doug Leavens Boulevard, and Ninth Line and Osprey Boulevard operate in free-mode with various cycle lengths, which is common at low-to-medium volume intersections. However, with the widening and urbanization of Ninth Line and the forecasted increase in traffic volumes, it is assumed that these intersections will be co-ordinated and operate under a semi-actuated mode of control (with Ninth Line operating as the major street). Therefore, these intersections were modelled under future background conditions with a semi-actuated mode of control and a cycle length of 100 seconds.

Auxiliary northbound and southbound right-turn lanes were modelled on Ninth Line at the intersection of Britannia Road West and Ninth Line, as these lanes are assumed to be provided as part of the Ninth Line corridor widening and urbanization.

Under the 2036 future background scenario with additional improvements (Derry Road West and Britannia Road West widening within the City of Mississauga), auxiliary right-turn lanes were modelled at the Derry Road West and Britannia Road West intersections with Ninth Line, as these lanes are assumed to be provided as part of the corridor widenings.

4.7 Intersection Operations

The future background intersection operations at the study intersections were analyzed using the 2023, 2026, 2031 and 2036 future background traffic volumes illustrated in **Figures 8-11**, and optimized signal timings. Detailed capacity analysis worksheets are included in **Appendix F**.

2036 future background conditions were modelled under two scenarios: with and without the additional improvements (Derry Road West and Britannia Road West widening within the City of Mississauga).

Tables 13-16 outline the 2023, 2026, 2031 and 2036 future background traffic operations. **Table 17** outlines the 2036 future background traffic operations with additional improvements (Derry Road West and Britannia Road West widening within the City of Mississauga).

Table 13: 2023 Future Background Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Derry Road West and 407 North Ramp Terminal	Signal	A.M.	A	8.6 s	0.73 (NBR)	None
		P.M.	A	6.8 s	0.65 (NBR)	None

Winston Churchill Boulevard and 401 West Ramp Terminal	Signal	A.M.	B	18.9 s	0.74 (WBR)	None
		P.M.	D	39.4 s	0.90 (WBL) 0.91 (NBT)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds. All v/c ratios that exceed the critical thresholds outlined in Section 3.7 are outlined and highlighted.

Note 3: 95th percentile queue lengths which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

The following intersections are expected to operate near or at capacity under 2036 future background conditions:

- Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
- Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
- Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future background conditions and with no roadway improvements to the aforementioned corridors within the City of Mississauga.

The forecasted 95th percentile queue lengths for the off-ramp approaches at the Highway 401 and 407 ramp terminals will not extend to the freeway segments of Highway 401 and 407 as the off-ramp lengths are in the order of 500 metres or more.

The forecasted 95th percentile queue lengths for most of the turning movements at the intersections of Derry Road West and Ninth Line, and Britannia Road West and Ninth Line are expected to be accommodated by the taper lengths and centre turn-lane extensions from these turn lanes, and thus not interfere with through traffic. The exception is the eastbound left-turn at both of the aforementioned intersections, for which the queue lengths are currently extending beyond the designated storage lengths. However, these movements are not expected to operate near capacity, and thus it is assumed that these queues will dissipate within one cycle length (consistent with existing conditions).

The intersections on Ninth Line are expected to operate at LOS "C" or better under 2036 future background conditions, with minor control delays and no critical volume-to-capacity ratios. The 95th percentile queue length for the westbound left-turn movement at the intersection of Ninth Line and Osprey Boulevard is expected to extend beyond the designated storage length during the weekday a.m. and p.m. peak hours, as consistent with existing conditions. However, the road width of Osprey Boulevard east of the westbound left-turn lane was observed to allow for separation of queued westbound left-turn vehicles from westbound right-turn vehicles.

These operations indicate that the widening of Derry Road West and Britannia Road West within the City of Mississauga would improve future background traffic operations, as recommended in the MMM study.

Table 17: 2036 Future Background Traffic Operations (With Additional Improvements)

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Derry Road West and 407 North Ramp Terminal	Signal	A.M.	B	11.5 s	0.78 (NBR)	None
		P.M.	B	10.4 s	0.79 (NBR)	None
Derry Road West and 407 South Ramp Terminal	Signal	A.M.	A	4.5 s	0.58 (EBT)	None
		P.M.	C	29.2 s	0.91 (SBR)	185.1 m > 120 m (SBR)
Derry Road West and Ninth Line	Signal	A.M.	D	40.1 s	0.82 (EBL) 0.82 (SBT)	111.4 m > 75 m (EBL)
		P.M.	D	48.8 s	0.93 (SBL)	123.3 m > 75 m (EBL) 77.1 > 70 m (SBR)
Britannia Road West and Ninth Line	Signal	A.M.	D	43.0 s	0.88 (SBT)	99.5 m > 50 m (NBL)
		P.M.	D	47.1 s	0.89 (NBT) 0.89 (SBT)	78.6 m > 60 m (EBL)
Britannia Road West and 407 North Ramp Terminal	Signal	A.M.	B	15.7 s	0.83 (NBR)	104.2 m > 70 m (NBR)
		P.M.	A	7.9 s	0.73 (NBR)	None
Britannia Road West and 407 South Ramp Terminal	Signal	A.M.	C	23.7 s	0.88 (SBL)	None
		P.M.	C	21.9 s	0.87 (SBL)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds. All v/c ratios that exceed the critical thresholds outlined in Section 3.7 are outlined and highlighted.

Note 3: 95th percentile queue lengths which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

These operations indicate that the Derry Road West and Britannia Road West corridors are expected to operate at LOS "D" or better under 2036 future background conditions with the widening of the aforementioned corridors within the City of Mississauga. This indicates that operations are expected to improve with the widening of the corridors and the implementation of auxiliary right-turn lanes.

These results reinforce the recommendations from the MMM study to widen Derry Road West and Britannia Road West within the City of Mississauga in the study area.

It should be noted that the operations outlined above can still be considered conservative, as the background traffic associated with the Emerging Land Use Scenario Zone "5" that overlaps the subject property was not removed from the Derry Road West and Britannia Road West intersections.

5.0 Site Generated Traffic

The proposed development will result in additional vehicles on the boundary road network that would otherwise not exist. The proposed development will also result in additional turning movements at the study intersections.

5.1 Trip Generation

Trip generation for the proposed development was forecasted using published data from the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition. The ITE Trip Generation Manual is a compendium of industry collected trip generation data across North America for a variety of land uses, and is used industry-wide as a source for trip generation forecasts.

The following Land Use Categories (LUC) were applied to the proposed residential development:

- LUC 210 "Single-Family Detached Housing" was applied to the rear-lane detached units;
- LUC 220 "Multifamily Housing (Low-Rise)" was applied to the townhouse and condominium duplex units; and
- LUC 222 "Multifamily Housing (High-Rise)" was applied to the high-density condominium apartment units.

A fitted curve equation is provided for all land use categories outlined above, and the number of data plot points exceeds 20 data points. Therefore, the fitted curve equation was used to forecast trip generation for the proposed development.

The development proposes a range of unit counts for condominium apartments, with a range of 140-200 units for the north Draft Plan and 350-1360 for the south Draft Plan. For the purposes of conservative analysis, the upper threshold of unit counts was accounted for in this analysis.

Table 18 outlines the trip generation for both the north and south Draft Plans, as well as full build-out of the proposed development.

Table 18: Trip Generation

North Draft Plan (2023)					
ITE Land Use Category	**Units**	**Peak Hour**	**Trips Generated**		
			Inbound	**Outbound**	**Total**
LUC 210 "Single-Family Detached Housing"	30	A.M.	6	20	26
		P.M.	20	12	32
LUC 220 "Multifamily Housing (Low-Rise)"	168	A.M.	18	60	78
		P.M.	59	35	94
LUC 222 "Multifamily Housing (High-Rise)"	200	A.M.	17	52	69
		P.M.	47	30	77
Total	**398**	**A.M.**	**41**	**132**	**173**
		P.M.	**126**	**77**	**203**
South Draft Plan (2026)					
ITE Land Use Category	**Units**	**Peak Hour**	**Trips Generated**		
			Inbound	**Outbound**	**Total**
LUC 220 "Multifamily Housing (Low-Rise)"	351	A.M.	36	121	157
		P.M.	114	67	181
LUC 222 "Multifamily Housing (High-Rise)"	1360	A.M.	94	300	394
		P.M.	287	184	471
Total	**1,711**	**A.M.**	**130**	**421**	**551**
		P.M.	**401**	**251**	**652**
Full Build-Out (2026)					
ITE Land Use Category	**Units**	**Peak Hour**	**Trips Generated**		
			Inbound	**Outbound**	**Total**
Development Total	**2,109**	**A.M.**	**171**	**553**	**724**
		P.M.	**527**	**328**	**855**

The full build-out of the proposed development is expected to generate a total of 724 and 855 total two-way trips during the weekday a.m. and p.m. peak hours, respectively. Given the sole residential land use, no internal synergy trips or pass-by trips are expected for the proposed development.

5.2 Trip Distribution

The trips generated by the proposed development were distributed to the boundary road network based on 2016 Transportation Tomorrow Survey (TTS) data. TTS is a comprehensive survey of transportation characteristics of households in the Greater Toronto Area (GTA) and surrounding areas.

For the proposed development, TTS results were filtered to auto trips exiting 2006 GTA Zones 3615, 3616, 3809, 3810 and 3811 during the weekday a.m. peak period. These zones consist of the residential zones

along the Ninth Line corridor, and thus were considered to be appropriate for trip distribution analysis. The row variable was set to "Planning District of Destination" and the column variable was set to "Use of 407" to quantify the number of trips travelling to each destination that use Highway 407 ETR.

From this query, trip destinations were determined and percentage of trips assigned to each destination was accounted for. Trips were assumed to travel to and from their destination points based on the most convenient route, taking into account trips using Highway 407 ETR and trips not using Highway 407 ETR.

It was determined that approximately 65% of the total outbound trips exiting the study area during the weekday a.m. peak period are internal to Mississauga. Accordingly, trip distribution internal to Mississauga was determined using a combination of existing travel patterns, expected destinations, and TTS results for trips travelling within Planning District "Mississauga."

The MTO has requested that the Highway 401 ramp terminals at Winston Churchill Boulevard be analyzed. From the trip distribution analysis, it was assumed that approximately 30% of all site generated traffic would arrive from and depart to the east via Derry Road West. These trips are primarily assigned to and from Meadowvale West, the employment areas surrounding Highway 401, and Highway 401 (east). Trips accessing Highway 401(east) are primarily expected to do so at the Mississauga Road interchange via Derry Road West. However, for the purposes of conservative analysis, it was assumed that half of the 30% of trips to and from the east via Derry Road West would access Highway 401 via the Winston Churchill Boulevard interchange.

The resultant trip distribution is outlined in **Table 19.** The breakdown of trips arriving from and departing to the east via Derry Road West is outlined to quantify trips that are assumed to access Highway 401 via the Winston Churchill Boulevard interchange.

Table 19: Trip Distribution

Arriving From / Departing To	Percentage
Derry Road West (east)	**30%**
Meadowvale, Employment Areas, and Highway 401 (east) via Mississauga Road	*15%*
Highway 401 (east) via Winston Churchill Boulevard	*15%*
Derry Road West (west)	**5%**
Ninth Line (north)	**10%**
Ninth Line (south)	**30%**
Highway 407 (north)	**10%**
Highway 407 (south)	**5%**
Britannia Road West (east)	**5%**
Doug Leavens Boulevard (east)	**5%**
Total	**100%**

Figures 12 and 13 outline the trip distribution for both the north and south Draft Plans, respectively. **Appendix J** contains the TTS data.

5.3 Trip Assignment

The trip distribution outlined in **Section 5.2** was applied to the site trip generation to calculate the trip assignment for both Draft Plans. Trips were assumed to travel to and from their destination points based on the most convenient route.

Figures 14 and 15 outline the trip assignment for both the north and south Draft Plans, respectively. **Figure 16** outlines the net trip assignment for the full build-out of the proposed development.

6.0 Future Total Conditions

6.1 Basis of Assessment

The site generated traffic volumes illustrated in **Figure 14** were added to the 2023 future background traffic volumes in **Figure 8** to determine 2023 future total traffic volumes. **Figure 17** illustrates the 2023 future total traffic volumes.

The site generated traffic volumes illustrated in **Figure 16** were added to the 2026, 2031 and 2036 future background traffic volumes in **Figures 9-11** to determine 2026, 2031 and 2036 future total traffic volumes. **Figures 18-20** illustrate the 2026, 2031 and 2036 future total traffic volumes.

6.2 Signal Warrant Analysis

A signal warrant analysis was conducted for the unsignalized site accesses to Ninth Line (Street "B", Street "K", and Street "O" opposite Foxwood Avenue) under 2036 future total conditions. The analysis followed the procedures specified in Chapter 4 of the "Ontario Traffic Manual – Book 12", March 2012. Justifications 1 (Minimum Vehicular Volume), 2 (Delay to Cross Traffic), 3 (Combination of Justifications 1 and 2), and 4 (4-Hour Volume) were selected as the most appropriate warrants with which to assess the site connections.

The average hour volume was determined using the following formula from OTM Book 12:

$$AHV = (amPHV + pmPHV) / 4$$

Where;

AHV = average hour volume
PHV = peak hour volume

Despite the existing speed limit of 70 km/h on Ninth Line being considered "free flow" in the signal warrant analysis, an "urban" operating environment was applied to the signal warrant analysis to reflect the future urbanization of Ninth Line and surrounding future developments.

Table 20 outlines the results of the signal warrant analysis.

Table 20: Signal Warrant Analysis Results

Location	Draft Plan	Operating Environment	Horizon Year	Number of lanes on major road	Traffic Signals Warranted?
Street "B" and Ninth Line (new intersection)	1 (North)	Urban	2036 Future Total	Four	No
Street "K" and Ninth Line (new intersection)	2 (South)	Urban	2036 Future Total	Four	No
Street "O" and Ninth Line at Foxwood Avenue	2 (South)	Urban	2036 Future Total	Four	No

The results of the signal warrant analysis indicate that traffic signals are not warranted at the site accesses to Ninth Line (Street "B", Street "K", and Street "O" opposite Foxwood Avenue).

Appendix K contains the signal warrant sheets.

6.3 Auxiliary Left-Turn Lane Analysis – Unsignalized Intersections

Auxiliary left-turn lane warrant analysis was conducted at the proposed site connections to Ninth Line under 2036 future total conditions. The analysis was conducted using the Ministry of Transportation (MTO)'s "Design Supplement for TAC Geometric Design Guide for Canadian Roads – June 2017" for the unsignalized site accesses to Ninth Line (Street "B", Street "K", and Street "O" opposite Foxwood Avenue). As the proposed site accesses will be located on the west side Ninth Line, the northbound left-turn movement was analyzed for left-turn lane requirements.

The design speed of a roadway in an urban environment is typically 10-20 km/h greater than the posted speed limit. The posted speed limit on Ninth Line is 70 km/h. Therefore, a design speed of 90 km/h was assumed for the left-turn lane warrant analysis.

As the future cross-section of Ninth Line is assumed to consist of a centre turn lane or centre median, the warrant for "Left Turn Storage Lanes Four-Lane Divided Highways Unsignalized" was applied to the 2036 horizon year.

An auxiliary left-turn lane warrant analysis was also conducted at the proposed unsignalized Street "B" site connection to Ninth Line under 2023 future total conditions assuming the existing two-lane cross-section on Ninth Line. This analysis was conducted using the warrant for "Left Turn Storage Lanes Two Lane Highways Unsignalized." This analysis was conducted to determine if the North Draft Plan build-out would trigger a northbound left-turn lane on Ninth Line at Street "B" prior to the road widening.

Table 21 outlines the results of the left-turn lane warrant analysis for the unsignalized site connections.

Table 21: Left-Turn Lane Warrant Analysis Results – Unsignalized Intersections

Location	Draft Plan	Movement	Design Speed	Horizon Year	Number of lanes on major road	Left-Turn Lane Storage Requirement?
Street "B" and Ninth Line (new intersection)	1 (North)	Northbound Left-Turn	90 km/h	2036	Four	25 metres
				2023	Two	None
Street "K" and Ninth Line (new intersection)	2 (South)	Northbound Left-Turn	90 km/h	2036	Four	95 metres
Street "O" and Ninth Line at Foxwood Avenue	2 (South)	Northbound Left-Turn	90 km/h	2036	Four	65 metres

The results of the left-turn lane analysis indicate that an auxiliary northbound left-turn lane is warranted at the unsignalized site connections at Ninth Line under 2036 future total conditions for the five-lane cross-section of Ninth Line. The reasoning for the required storage is the southbound opposing volumes during the weekday p.m. peak hour despite the relatively low inbound northbound left-turn volumes.

An auxiliary northbound left-turn lane is not warranted under 2023 future total conditions assuming the existing two-lane cross-section on Ninth Line at Street "B". This is attributed to the low forecasted inbound left-turn volumes during the weekday a.m. and p.m. peak hours consisting of a low percentage of the total approach volumes and thus not triggering the left-turn lane warrant thresholds.

Therefore, the warranted auxiliary northbound left-turn lane under 2036 future total conditions at Street "B" and Ninth Line should be implemented in conjunction with the Ninth Line road widening, and the warranted auxiliary northbound left-turn lanes under 2036 future total conditions at Street "K" and Ninth Line, and Street "O" and Ninth Line opposite Foxwood Avenue should be implemented upon construction of the site connections (assuming that Ninth Line has already been widened prior to the construction of the South Draft Plan site connections).

Appendix L contains the left-turn warrant analysis worksheets.

The northbound left-turn lanes are also required to provide a deceleration lane and taper.

A taper length range of approximately 85-95 metres must be provided for the northbound left-turn lanes per the TAC GDGCR. This taper length range is based on an assumed design speed of 90 km/h on River Road west, and the corresponding minimum taper ratio of 27:1 (i.e. 27 metres of taper length must be provided for every 1.0 metre of lane width) per Table 9.17.1. The range of 85-95 metres is based on an auxiliary left-turn lane width ranging from 3.0 metres to 3.5 metres (which is equivalent to the width of the through lanes on Ninth Line).

Per Table 2.5.2 of the TAC GDGCR, a design deceleration length of 95 metres must be provided for the northbound left-turn lanes for level roadways.

The cross-sectional details of the future Ninth Line widening is unknown at this time; however, it is assumed that a centre turn lane or centre median will be provided. If the future cross-section of Ninth Line includes a centre turn lane, the northbound left-turn storage requirements for the unsignalized site connections can be accommodated by the centre turn lane. If the future cross-section of Ninth

Line includes a centre median, then auxiliary northbound left-turn lanes will have to be constructed at the site accesses and be integrated with the centre median of Ninth Line.

The configuration of the northbound left-turn lanes should be established at a later stage when details of the future Ninth Line cross-section are confirmed.

Appendix M contains conceptual designs for the recommended auxiliary turn lanes on the future five-lane cross-section of Ninth Line. The conceptual designs illustrate how the auxiliary left-turn lanes could be incorporated into the future centre median or centre turn lane.

6.4 Auxiliary Left-Turn Lane Analysis – Signalized Intersections

Auxiliary northbound left-turn lane requirements were analyzed at the proposed site connections to the signalized intersections on Ninth Line at Doug Leavens Boulevard and Osprey Boulevard under 2036 future total conditions.

Analysis of 95th percentile queue lengths for the northbound left-turn movement at the aforementioned intersections under 2036 future total conditions indicates that a northbound left-turn lane with a designated storage length of 15 metres should be sufficient to accommodate left-turn lane requirements.

As detailed in Section 6.3, the northbound left-turn lanes must provide a taper length between 85-95 metres and a deceleration length of 95 metres. The configuration of the northbound left-turn lanes should be established at a later stage when details of the future Ninth Line cross-section are confirmed.

Auxiliary northbound left-turn lane requirements were analyzed at the proposed site connections to the signalized intersection on Ninth Line at Doug Leavens Boulevard under 2023 future total conditions assuming the existing two-lane cross-section on Ninth Line. This analysis was conducted to determine northbound left-turn lane requirements on Ninth Line at Doug Leavens Boulevard prior to the road widening. It was determined that a northbound left-turn lane with a designated storage length of 15 metres should be sufficient to accommodate left-turn lane requirements, which can be provided by repurposing the existing runout lane at the south approach of Ninth Line at Doug Leavens Boulevard via pavement marking revisions. Therefore, no road widenings are required under 2023 future total conditions in the interim scenario.

Appendix M contains conceptual designs for the recommended auxiliary turn lanes on the future five-lane cross-section of Ninth Line. The conceptual designs illustrate how the auxiliary left-turn lanes could be incorporated into the future centre median or centre turn lane.

6.5 Right-Turn Lane Warrant Analysis

Auxiliary right-turn lane warrant analysis was conducted at the proposed site connections to Ninth Line under 2036 future total conditions. As the proposed site accesses will be located on the west side Ninth Line, the southbound right-turn movement was analyzed for right-turn lane requirements.

Per the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GFGCR), June 2017, a right-turn auxiliary lane on an urban or rural road should be implemented at unsignalized intersections when the volume of decelerating or accelerating vehicles compared with the through traffic volume causes undue hazard.

It is a common convention in traffic engineering that an auxiliary right-turn lane should be provided where right-turn volumes exceed 60 vehicles per hour. The forecasted southbound right-turn volumes at the site connections to Ninth Line under 2036 future total conditions are below 60 vehicles per hour, with the exception of the Street "O" connection to Ninth Line at the existing Foxwood Avenue intersection (forecasted to be 120 vehicles per hour during the weekday p.m. peak hour). The high inbound right-turn volumes at this location is attributed to the location of the high-density condominium apartments blocks within the site.

The forecasted southbound through volume on Ninth Line at this intersection is 1459 vehicles per hour during the weekday p.m. peak period. Additionally, the design speed of Ninth Line is assumed to be 90 km/h, which is reflective of high operating speeds. Therefore, an auxiliary southbound right-turn lane should be provided on Ninth Line at the intersection of Street "O" and Foxwood Avenue, and be implemented upon construction of the Street "O" site connection to Foxwood Avenue in the 2026 horizon year.

Right-turn lane storage lengths for unsignalized intersections is calculated using equation 9.14.1 from the GDGCR as outlined below:

$$S = (N * L) / 30$$

Where;
S = storage length (m)
N = design volume of turning vehicles (veh/hr)
L = length (m) occupied by each design vehicle

As the primary vehicle type for the site accesses is assumed to be primarily passenger cars, a design length of 7.5 metres (a standard passenger car length of 5.6 metres per TAC plus vehicle headway) was applied to the formula above. The resultant southbound right-turn lane storage requirement on Ninth Line at Street "O" and Foxwood Avenue is 30 metres.

The southbound right-turn lane is also required to provide a deceleration lane and taper. Per Chapter 10 of the TAC GDGCR for a design speed of 90 km/h, the auxiliary southbound right-turn lane must provide a taper of 80 metres and a deceleration lane ranging from 150-195 metres to allow vehicles to decelerate from operating speed to a stop condition.

The configuration of the southbound right-turn lane should be established at a later stage when details of the future Ninth Line cross-section are confirmed.

Appendix M contains conceptual designs for the recommended auxiliary turn lanes on the future five-lane cross-section of Ninth Line, including the auxiliary southbound right-turn lane at Street "O" opposite Foxwood Avenue.

6.6 Site Access Configuration

The proposed unsignalized site connections to Ninth Line (Street "B", Street "K", and Street "O" opposite Foxwood Avenue) should consist of one outbound left-turn lane and one outbound through/right-turn lane). The site connections should consist of a three-lane cross-section to allow for two outbound lanes and one inbound lane.

The proposed site connections to the existing signalized intersections of Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard should mirror the cross-section of the existing roadways. For

example, the east approach at Ninth Line and Doug Leavens Boulevard currently consists of an exclusive left-turn and right-turn curb lane. The site connection at the west approach of the intersection should also provide an exclusive left-turn lane aligned with the east approach, designating the curb lane as a shared through/right-turn lane. The site connections should consist of a three-lane cross-section to allow for two outbound lanes and one inbound lane.

The auxiliary turn lane conceptual drawings provided **in Appendix M** also illustrate the recommended configurations of the proposed site connections to Ninth Line.

6.7 Intersection Operations

The future total intersection operations at the study intersections were analyzed using the 2023, 2026, 2031 and 2036 future total traffic volumes illustrated in **Figures 17-20**, and optimized signal timings. Detailed capacity analysis worksheets are included in **Appendix F**.

2036 future total conditions were modelled under two scenarios: with and without the additional background improvements (Derry Road West and Britannia Road West widening within the City of Mississauga).

Tables 22-25 outline the 2023, 2026, 2031 and 2036 future total traffic operations. **Table 26** outlines the 2036 future total traffic operations with additional background improvements (Derry Road West and Britannia Road West widening within the City of Mississauga).

Table 22: 2023 Future Total Traffic Operations

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Derry Road West and 407 North Ramp Terminal	Signal	A.M.	A	8.6 s	0.73 (NBR)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds. All v/c ratios that exceed the critical thresholds outlined in Section 3.7 are outlined and highlighted.

Note 3: 95th percentile queue lengths which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

The following intersections are expected to operate near or at capacity under 2036 future total conditions:

- Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
- Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
- Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are consistent with 2036 future background conditions, and are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future total conditions and with no background roadway improvements to the aforementioned corridors within the City of Mississauga.

It is noted that while the intersection of Derry Road West and Ninth Line is expected to change from LOS "E" to "F" under future total conditions during the weekday p.m. peak hour, and the intersection of Britannia Road West and Ninth Line is expected to change from LOS "E" to "F" under future total conditions during the weekday a.m. peak hour; the maximum forecasted increase in intersection control delay at these intersections attributed to site traffic is 10.3 seconds (i.e. a maximum increase of approximately 14%). These impacts are considered relatively minor given the already congested conditions at the aforementioned intersections under 2036 future background conditions (in which even a small increase in traffic can exponentially worsen traffic operations).

The impacts of site generated traffic at the Highway 401 and 407 ramp terminals are minimal, with a maximum forecasted increase in intersection control delay of 1.5 seconds compared to 2036 future background conditions. The forecasted 95th percentile queue lengths for the off-ramp approaches at the Highway 401 and 407 ramp terminals will not extend to the freeway segments of Highway 401 and 407 as the off-ramp lengths are in the order of 500 metres or more.

The forecasted 95th percentile queue lengths for most of the turning movements at the intersections of Derry Road West and Ninth Line, and Britannia Road West and Ninth Line are expected to be accommodated by the taper lengths and centre turn-lane extensions from these turn lanes, and thus not interfere with through traffic, as consistent with future background conditions.

The signalized intersections of Ninth Line and Doug Leavens Boulevard, and Ninth Line and Osprey Boulevard are expected to operate at LOS "B" under 2036 future total conditions with minor control delays and no movements operating with critical volume-to-capacity ratios. These operations indicate that the proposed site access connections to these existing intersections are not expected to significantly impact traffic operations.

The unsignalized site connections to Ninth Line are expected to operate at LOS "D" or better under 2036 future total conditions with minor control delays and no movements operating with critical volume-to-capacity ratios. These operations are considered acceptable for stop-controlled accesses to major roadways with heavy traffic volumes during the weekday a.m. and p.m. peak hours.

The operations described above indicate that the widening of Derry Road West and Britannia Road West are required within the City of Mississauga as a background roadway improvement to improve traffic operations, as recommended in the MMM study.

Table 26: 2036 Future Total Traffic Operations (With Additional Improvements)

Intersection	Control	Peak Hour	Level of Service [1]	Control Delay	Critical v/c ratio [2]	95th Percentile Queue Length > Storage Length [3]
Derry Road West and 407 North Ramp Terminal	Signal	A.M.	B	11.6 s	0.78 (NBR)	None
		P.M.	B	10.9 s	0.80 (NBR)	None
Derry Road West and 407 South Ramp Terminal	Signal	A.M.	A	4.9 s	0.58 (EBT)	None
		P.M.	C	29.4 s	0.90 (SBR)	185.1 m > 120 m (SBR)
Derry Road West and Ninth Line	Signal	A.M.	D	45.5 s	0.90 (NBL)	119.7 m > 75 m (EBL)
		P.M.	D	52.9 s	1.06 (SBT)	108.5 m > 75 m (EBL) 85.1 m > 70 m (SBR)
Britannia Road West and Ninth Line	Signal	A.M.	D	46.7 s	1.03 (SBT)	104.6 m > 50 m (NBL)
		P.M.	D	51.6 s	0.93 (NBT)	110.8 m > 60 m (EBL)
Britannia Road West and 407 North Ramp Terminal	Signal	A.M.	B	16.2 s	0.83 (NBR)	107.6 m > 70 m (NBR)
		P.M.	A	9.2 s	0.77 (NBR)	None
Britannia Road West and 407 South Ramp Terminal	Signal	A.M.	C	23.7 s	0.88 (SBL)	None
		P.M.	C	21.9 s	0.87 (SBL)	None

Note 1: The Level of Service of a signalized intersection is based on the average control delay per vehicle (Synchro/ICU). The Level of Service of a stop-controlled intersection is based on the delay associated with the critical minor road approach (HCM2000).

Note 2: The critical v/c ratio is considered to be the maximum v/c ratio for movements at the intersection where the maximum v/c ratio does not exceed the critical thresholds. All v/c ratios that exceed the critical thresholds outlined in Section 3.7 are outlined and highlighted.

Note 3: 95th percentile queue lengths which exceed the designated storage length of the turn lane but can be accommodated by a centre turn lane were not documented in this table.

These operations indicate that the Derry Road West and Britannia Road West corridors are expected to operate at LOS "D" or better under 2036 future total conditions with the future background widening of the aforementioned corridors within the City of Mississauga. This indicates that operations are expected to improve with the widening of the corridors and the implementation of auxiliary right-turn lanes. The maximum forecasted increase in intersection control delay at these intersections attributed to site traffic is 5.4 seconds (i.e. a maximum increase of approximately 13%).

It should be noted that the operations outlined above can still be considered conservative, as the background traffic associated with the Emerging Land Use Scenario Zone "5" that overlaps the subject property was not removed from the Derry Road West and Britannia Road West intersections.

Overall, the addition of site generated traffic to the boundary road network is not expected to significantly impact traffic operations. Therefore, the proposed development is supportable from a traffic operations perspective, with the implementation of the noted recommendations.

7.0 Safety Review

Per the City of Mississauga's guidelines, a safety review of the proposed development is required. The purpose of the safety review is to identify any safety deficiencies for auto drivers, pedestrians and cyclists for the proposed development, and to identify how the development proposes to maximize safety for all road users.

7.1 Access Spacing

The development proposes five site connections on Ninth Line between Britannia Road West and Derry Road West. The proposed site connections are evenly spaced out at the site frontage at a minimum of 280-300 metre spacing. This access spacing will reduce the potential for weaving or merging conflicts associated with traffic entering and exiting at the site accesses.

It is further noted that three of the five proposed site connections will align with existing roadways on Ninth Line: Doug Leavens Boulevard, Foxwood Avenue, and Osprey Boulevard. By locating the proposed site connections to existing intersections, the potential for vehicle-vehicle collisions that would arise from an offset access alignment is reduced.

The Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), June 2017, suggests a minimum intersection spacing of 200 metres along minor arterial roadways. Thus, the proposed site connection spacing is greater than the minimum suggested intersection spacing per the TAC GDGCR.

7.2 Sight Distance Analysis

The available sightlines at the proposed Ninth Line connections were measured and compared to the standards set out in the TAC GDGCR. Sight distance was measured from the proposed site accesses using the following assumptions:

- A standard driver eye height of 1.08 metres for a passenger car, and
- A 4.4 metre setback from the approximate extension of the outer curb to represent a vehicle waiting to exit the site.

Intersection sight distance is calculated using equation 9.9.1 from the GDGCR as outlined below:

$$ISD = 0.278 * V\ major * tg$$

Where;
ISD = Intersection Sight Distance
V major = design speed of roadway (km/h)
tg = assumed time gap for vehicles to turn from stop onto roadway (s)

The design speed of a roadway in an urban environment is typically 10-20 km/h greater than the posted speed limit. The posted speed limit on Ninth Line is 70 km/h. It is unknown if the speed limit will decrease with the widening of Ninth Line. Therefore, a conservative design speed of 90 km/h was assumed for the sight distance analysis.

Table 27 outlines the sight distance analysis for the proposed Ninth Line connections.

Table 27: Sight Distance Analysis

Feature	Street "B" and "K"	Street "F"	Street "O"	Street "A"
Access Type	Full-Moves	Full-Moves (opposite Doug Leavens Boulevard)	Full-Moves (opposite Foxwood Avenue)	Full-Moves (opposite Osprey Boulevard)
Intersection Control	Stop (Minor Street)	Signals	Stop (Minor Street)	Signals
Posted Speed Limit of Roadway	70 km/h	70 km/h	70 km/h	70 km/h
Assumed Design Speed	90 km/h	90 km/h	90 km/h	90 km/h
Base Time Gap	7.5 s [1]	7.5 s [1]	7.5 s [1]	7.5 s [1]
Additional Time Gap	1.0 (time to cross additional through lane and centre turn lane)	1.0 (time to cross additional through lane and centre turn lane)	1.0 (time to cross additional through lane and centre turn lane)	1.0 (time to cross additional through lane and centre turn lane)
Grade of Roadway	Less than 3%	Less than 3%	Less than 3%	Less than 3%
Horizontal Alignment of Roadway	Straight	Straight	Straight	Straight
Sight Distance Required	215 m [2]	215 m [2]	215 m [2]	215 m [2]
Measured Sight Distance	> 400 m (to north and south)	> 400 m (to north and south)	> 400 m (to north and south)	> 400 m (to north and south)
Minimum Sight Distance Satisfied?	Yes	Yes	Yes	Yes

Note 1: Time gap for left-turning vehicles from a stop onto a two-lane highway with no median and with a grade less than 3%. Value from Table 9.9.3 in the GDGCR.
Note 2: Sight distance values calculated from Intersection Sight Distance equation 9.9.1 in the GDGCR.

As outlined in **Table 7**, minimum sight distance requirements are satisfied at the proposed Ninth Line connections.

Therefore, the proposed development is supportable from a sight distance perspective.

7.3 Roadway Alignment

The horizontal alignment of the boundary road network in the study area is relatively straight, and the vertical alignment of the boundary road network is relatively flat. Therefore, roadway alignment is not considered to be a traffic safety concern for the proposed development.

7.4 Clear Throat Length

Minimum recommended clear throat lengths were analyzed for the site connections to Ninth Line.

Per the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), Table 8.9.3 "Suggested Minimum Clear Throat Lengths for Major Driveways" indicates that a minimum clear throat length for "apartment" developments exceeding 200 units of 40 metres from arterial roads.

The minimum measured clear throat lengths at the site connections is approximately 45 metres which exceeds the recommended minimum of 40 metres from arterial roads.

Therefore, the available clear throat lengths for the internal roadways connecting to Ninth Line satisfy TAC minimum recommended clear throat lengths.

8.0 Conclusions & Recommendations

8.1 Conclusions

The analysis contained within this report has resulted in the following key findings:

- Analysis of 2019 existing traffic operations indicates that the boundary road network is currently operating at LOS "D" or better during the weekday a.m. and p.m. peak hours, with the exception of the intersection of Britannia Road West and Ninth Line which is currently operating at LOS "E" during the weekday a.m. peak hour.

- These operations are attributed to the eastbound through/right-turn and southbound through/right-turn movements operating near capacity. The eastbound and southbound through movements experience heavy volumes during the weekday a.m. peak hour. Additionally, the northbound through/right-turn movement is operating near capacity during the weekday p.m. peak hour. These operations are not uncommon at urban signalized arterial intersections.

- The off-ramp approaches at the Highway 407 West Terminal at Derry Road West, and Highway 401 West Ramp Terminal at Winston Churchill Boulevard are operating near capacity during the p.m. peak hour. However, queue lengths at the off-ramp approaches of the ramp terminals do not extend to the freeway segments of Highway 407 nor Highway 401 and are thus contained within the off-ramp segments.

- Overall, the boundary road network is currently operating at acceptable levels of service.

- Analysis of 2036 future background traffic operations indicates that the following intersections are expected to operate near or at capacity under 2036 future background conditions:

    - Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
    - Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
    - Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

- These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future background conditions and with no roadway improvements to the aforementioned corridors within the City of Mississauga.

- The widening of Derry Road West and Britannia Road West in the study area is expected to improve traffic operations under 2036 future background conditions so that all intersections are operating at overall acceptable levels of service.

- The full build-out of the proposed development is expected to generate a total of 724 and 855 total two-way trips during the weekday a.m. and p.m. peak hours, respectively.

- Analysis of external roadway improvements to support the North Draft Plan build-out for 2023 assuming the existing two-lane cross-section on Ninth Line indicates that an auxiliary northbound left-turn lane is not warranted at the Street "B" site connection to Ninth Line, and that an auxiliary northbound left-turn lane with a minimum of 15 metres of storage is required at the signalized site connection on Ninth Line at Doug Leavens Boulevard.

- The existing runout lane at the south approach of Ninth Line and Doug Leavens Boulevard can be repurposed via pavement marking revisions to function as a northbound left-turn lane in the interim condition prior to the widening of Ninth Line.

- Therefore, no road widenings are required under 2023 future total conditions in the interim scenario.

- Analysis of external roadway improvements under 2036 future total conditions has resulted in the following key findings:

    - Traffic signals are **not** warranted at the proposed unsignalized site connections to Ninth Line;
    - An auxiliary northbound left-turn lane is required at the Street "B" site connection to Ninth Line with a storage length of 25 metres, deceleration length of 95 metres, and taper between 85-95 metres (North Draft Plan build-out);
    - An auxiliary northbound left-turn lane is required at the Street "K" site connection to Ninth Line with a storage length of 95 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out);
    - An auxiliary northbound left-turn lane is required at the Street "O" site connection to Ninth Line at Foxwood Avenue with a storage length of 65 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out);

  - An auxiliary northbound left-turn lane is required at the signalized connection on Ninth Line at Doug Leavens Boulevard with a storage length of 15 metres, deceleration length of 95 metres, and taper between 85-95 metres (North Draft Plan build-out);
  - An auxiliary northbound left-turn lane is required at the signalized connection on Ninth Line at Osprey Boulevard with a storage length of 15 metres, deceleration length of 95 metres, and taper between 85-95 metres (full build-out); and
  - An auxiliary southbound right-turn lane should be provided on Ninth Line at the Street "O" site connection opposite Foxwood Avenue with a storage length of 30 metres, deceleration length between 150-195 metres, and taper of 80 metres (full build-out).

- The configuration of the required auxiliary turn lanes on Ninth Line should be established at a later stage when details of the future Ninth Line cross-section and centre median are confirmed.

- The proposed site connections to Ninth Line should consist of one outbound left-turn lane and one outbound right-turn lane, with the right-turn lane at the site accesses opposite Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard operating as a shared through/right-turn lane.

- Analysis of 2036 future total traffic operations indicates that the following intersections are expected to operate near or at capacity under 2036 future total conditions:

  - Derry Road West and Highway 407 South Ramp Terminal during the weekday p.m. peak hour;
  - Derry Road West and Ninth Line during the weekday a.m. and p.m. peak hours; and
  - Britannia Road West and Ninth Line during the weekday a.m. and p.m. peak hours.

- These intersections, as well as the other Highway 407 ramp terminals on Derry Road West and Britannia Road West, are expected to operate with movements exceeding critical volume-to-capacity thresholds, as well as 95th percentile queue lengths for turning movements exceeding their designated storage length. These operations are consistent with 2036 future background conditions, and are attributed to the high volumes forecasted on the Derry Road West and Britannia Road West corridors under 2036 future total conditions and with no background roadway improvements to the aforementioned corridors within the City of Mississauga.

- The widening of Derry Road West and Britannia Road West in the study area is expected to improve traffic operations under 2036 future background conditions so that all intersections are operating at overall acceptable levels of service.

- These operations are consistent with future background operations, indicating that the addition of site traffic to the boundary road network is not expected to significantly impact traffic operations.

- Therefore, the proposed development is supportable from a traffic operations perspective, with the implementation of the noted recommendations.

- Analysis of safety components associated with the proposed development indicate the following:

- The proposed site connection minimum spacing of 280-300 metres on Ninth Line at the site frontage will reduce the potential for weaving or merging conflicts associated with traffic entering and exiting at the site accesses;
- The proposed site connection spacing exceeds recommended minimum intersection spacing guidelines set out in the Transportation Association of Canada (TAC) Geometric Design Guide for Canadian Roads (GDGCR), June 2017;
- The available sight distance at the proposed site connections exceeds the minimum sight distance requirements set out in the TAC GDGCR;
- Roadway alignment of the boundary road network is not considered to be a traffic safety concern for the proposed development; and
- The available clear throat lengths for the internal roadways connecting to Ninth Line exceed the minimum recommended clear throat lengths set out in the TAC GDGCR.

8.2 Recommendations

The conclusions arising from this analysis have resulted in the following development-triggered recommendations to support the proposed development as outlined in **Table 28.**

Table 28: Recommended External Roadway Improvements

Location	Draft Plan	Improvement	Estimated Dimensions	Timing of Implementation
Ninth Line and Street "B"	North Draft Plan – 2023	Auxiliary northbound left-turn lane	25 metres storage 85-95 metres taper 95 metres deceleration	Ninth Line Road Widening
Ninth Line and Street "F" opposite Doug Leavens Boulevard	North Draft Plan – 2023	Auxiliary northbound left-turn lane	15 metres storage 85-95 metres taper 95 metres deceleration	Ninth Line Road Widening
Ninth Line and Street "K"	South Draft Plan – 2026	Auxiliary northbound left-turn lane	95 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection
Ninth Line and Street "O" opposite Foxwood Avenue	South Draft Plan – 2026	Auxiliary northbound left-turn lane	65 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection
		Auxiliary southbound right-turn lane	30 metres storage 80 metres taper 150-195 metres deceleration	
Ninth Line and Street "A" opposite Osprey Boulevard	South Draft Plan – 2026	Auxiliary northbound left-turn lane	15 metres storage 85-95 metres taper 95 metres deceleration	Construction of Site Connection

In addition to the external roadway improvements outlined above, the site connections to Ninth Line should be constructed so that one outbound left-turn lane and one outbound right-turn lane is provided, with the right-turn lane at the site accesses opposite Doug Leavens Boulevard, Foxwood Avenue and Osprey Boulevard operating as a shared through/right-turn lane.

The configuration of the required auxiliary turn lanes on Ninth Line should be established at a later stage when details of the future Ninth Line cross-section and centre median are confirmed.

Appendix M contains conceptual drawings for the recommended external roadway improvements, as well as the recommended configurations of the proposed site connections to Ninth Line.

The analysis contained within this report was prepared using the Concept Plan prepared by Glen Schnarr & Associates Inc. (dated June 6, 2019). Any minor revisions to the development concept are not expected to affect the conclusions contained with this report.

In conclusion, the proposed development can be supported from a transportation operations and safety perspective, with the implementation of the noted recommendations.

Subject: RE: Ninth Line Draft Plan of Subdivision TIS Terms of Reference

Morning Darren,

Our Traffic Office has reviewed your terms of reference for a possible future Traffic Impact Study submission and we offer the following comments:

- Include Highway 401 and Winston Churchill Blvd (North & South Ramp Terminal) in the analysis. In addition, ensure you include ministry data when finalizing the study.
- Complete existing, future background and future total traffic operations analysis using Synchro 10.

I hope this helps. Please call me if you have any questions.

Take care,
Ted Lagakos

Subject: RE: Ninth Line Draft Plan of Subdivision TIS Terms of Reference

Good morning Darren,

Phil has forwarded your request to my attention. I will be the main ministry contact for any future proposed Subdivision application.

As per our discussion, I will circulate the subject Terms of Reference for review and comment by our Traffic Office. All ministry comments for this file will be **preliminary only** as the site is located within the Parkway Belt West Plan/407 Transitway EA study. Please note that the alignment for the 407 Transitway is still under evaluation, a preferred alternative design will not be available to the public until late 2019, with approval anticipated in or around mid 2020.

I trust that this explains our position on this matter. I will send you our preliminary comments as soon as I hear back from the Traffic Office (typical turnaround for comments is 3 to 4 weeks depending on workload). If you have any further questions, please do not hesitate to contact me at the number below.

Take care,
Ted Lagakos
Senior Project Manager
Highway Corridor Management Section – Central Region

Subject: Ninth Line Draft Plan of Subdivision TIS Terms of Reference

Good morning Phil and Zain,

Hope all is well on your end.

We have been retained by Mattamy Homes to prepare a TIS for the Draft Plan of Subdivision application (plan attached) for the site located on Ninth Line in the City of Mississauga, Regional Municipality of Peel. The subject property is located in a residential neighbourhood and is bound by a Union Gas Limited building to the north, an existing church to the south, Ninth Line to the east, and Parkland Belt lands and Highway 407 to the west.

Table 1 outlines the proposed development statistics.

Table 1
Proposed Development Statistics

Housing Type	Unit Type	Total Units
Freehold	Rear Lane Detached	61
	Street Townhouse	195
	Rear Lane Townhouse	248
	Total	**504**
Condo	Rear Lane Duplex	98
	Rear Lane Townhouse	18
	Back-To-Back Townhouse	88
	Apartments	336
	Total	**540**

We would like to circulate our proposed Terms of Reference with the MTO and City for review and comment. The proposed Terms of Reference is outlined below:

1. The TIS will analyze traffic impacts during the weekday a.m and p.m. peak hours.

2. The following intersections will be analyzed:
    a. Derry Road West and Highway 407 West Ramp Terminal
    b. Derry Road West and Highway 407 East Ramp Terminal
    c. Derry Road West and Ninth Line
    d. Ninth Line and Street "L"
    e. Ninth Line and Doug Leavens Boulevard / Street "B"
    f. Ninth Line and Foxwood Avenue / Street "C"
    g. Ninth Line and Osprey Boulevard / Street "A"
    h. Ninth Line and Britannia Road West
    i. Britannia Road West and Highway 407 West Ramp Terminal
    j. Britannia Road West and Highway 407 East Ramp Terminal

3. Traffic counts will be commissioned at the aforementioned intersection on a typical weekday between the hours of 6:00 a.m. – 10:00 a.m. and 3:00 p.m. – 7:00 p.m.

4. Existing, future background and future total traffic operations will be analyzed using Synchro 9.0. Standard traffic operations metrics for signalized and unsignalized intersections including delays, volume-to-capacity ratios, and 95th percentile queue length will be analyzed and reported on.

5. The development is expected to be fully built-out within seven years (i.e. by 2026). Per the MTO's TIS guidelines, the year of full build-out (2026), five-year horizon (2031) and ten-year horizon (2036) will be analyzed. Additionally, each year of major phases of the proposed development will be analyzed.

6. Background traffic growth will be calculated using the growth rates from the Ninth Line Corridor Study Transportation Assessment prepared for the City of Mississauga by MMM Group (July 2017). MMM applied a growth rate of 2% compounded annually at the off-ramp approaches at 400-series ramp terminals as instructed by the MTO. For consistency, this growth rate will be applied to the off-ramp approaches at Highway 407 ramp terminals in our analysis.

7. Trip generation will be forecasted using the ITE Trip Generation Manual, 10th Edition. Preliminary trip generation estimates indicate that the proposed development is expected to generate in the order of 450-550 total two-way trips during the critical weekday a.m. and p.m. peak hours.

8. Trip distribution will be derived from a combination of 2016 Transportation Tomorrow Survey (TTS) data and existing travel patterns.

9. Future total traffic operations will be compared to future background traffic operations under full build-out conditions to determine what mitigation measures are required on the boundary road network to accommodate the full build-out of the development. These mitigation measures include auxiliary turn lanes, signalization, etc.

10. Auxiliary left-turn lane requirements will be analyzed using the MTO's "Design Supplement for the Geometric Design Guide for Canadian Roads" and traffic signal requirements will be analyzed using the warrants set out in the Ontario Traffic Manual (OTM) Book 12 "Traffic Signals";

11. Future total traffic operations will then be compared to future background traffic operations for each phase of the proposed development to determine the timing of the full build-out improvements;

12. A functional design plan will be prepared for all recommended roadway improvements;

13. The proposed development will be reviewed from a transportation safety perspective to identify any issues pertaining to weaving, merging, queueing, and vehicle turning constraints within the site.

14. Existing and future Transportation Demand Management (TDM) opportunities will be evaluated to reduce auto share and promote non-auto transportation. This will include the impacts arising from the future 407 transitway running parallel to Highway 407.

Please review and comment on the terms of reference as outlined above. If this is satisfactory, we will begin our analysis immediately.

If you want to discuss further, please do not hesitate to give me a call.

Cheers,
Darren

Subject: RE: Ninth Line Draft Plan of Subdivision TIS Terms of Reference

Good morning Darren,

Thank you for providing the Terms of Reference for the Mattamy Homes development, please find below comments:

- The Traffic consultant is to contact Emily Pelleja (Emily.pelleja@mississauga.ca)in regards to the Ninth Line EA to determine timings and scope of work;
- Should any changes occur to the proposed site plan, the Traffic Impact Study will be required to be updated accordingly

Additionally, the MTO may have further comments regarding the ToR for the proposed development.

Regards,

Subject: RE: Ninth Line Draft Plan of Subdivision TIS Terms of Reference

Hi Darren,
Nice to email-meet you as well. To clarify, the City *will be* undertaking a Class EA for the Widening of Ninth Line from Eglinton Avenue West to Derry Road West. The study will officially commence in Q1 of 2020, with construction forecasted for 2023. I don't have any hard defined improvements beyond that it will be widened. I will keep you as a stakeholder.

If I can clarify anything, please don't hesitate to reach out.

Thanks,

Emily Pellejà, P.Eng.

Good afternoon Emily,

I am e-mailing you from Crozier & Associates Consulting Engineers. I don't believe we've ever spoke before, so it's nice to meet you – even if it is over e-mail!

Greg Borys has directed me to you to confirm details from the Ninth Line EA regarding the timing and scope of work for the future Ninth Line improvements. As part of our Traffic Impact Study that Greg provided comments on (see below), we need to account for the future Ninth Line improvements in our analysis. Would you be able to provide us with these details on timing and scope of work for the Ninth Line improvements?

If you have any questions or wish to discuss further, please do not hesitate to give me a call.

Thanks,
Darren

Union Station

Daily / Quotidiennement

Includes GO Bus routes 21 / Inclut les routes 21 d'autobus GO

Effective / À partir de:
5 JANUARY JANVIER 2019

How to read our schedules

Step 1
Find the station or terminal you are departing from. Stops are listed across the top in the order they are served.

Step 2
The upper left corner tells you what day the schedule is for and the direction of travel.

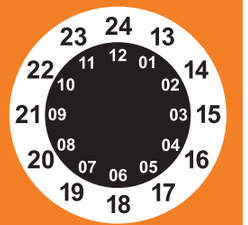

Step 3
Look across the rows for available departure times.

Step 4
Not all trains or buses stop at every station. If you see → the train or bus will not stop at that station.

Schedule times shown in 24-hour clock

Midnight to noon
00 01 - 12 00

Noon to midnight
12 01 - 24 00

Legend

- Train trips
- Bus trips
- → Trip does not serve this location.
- GO Bus service is accessible to passengers using mobility devices at this location.
- GO Train & GO Bus service is accessible to passengers using mobility devices at this location.
- P Parking available.

Notes

M-Th Trip operates Monday to Thursday ONLY.

Fri Trip operates on Fridays ONLY. If Friday is a holiday the trip operates on the Thursday before the holiday.

Bicycles

1. Bicycles are not allowed in Union Station or on-board trains during morning rush hour (6:30-9:30) and evening rush hour (15:30-18:30), Monday to Friday.
2. Foldable bicycles are allowed on-board trains at all times.

For the latest schedule information and updates, please visit gotransit.com/schedules.

Comment lire nos horaires

Étape 1
Trouvez votre gare ou terminus de départ. La liste des arrêts est donnée en haut dans l'ordre dans lequel ils sont desservis.

Étape 2
Le coin supérieur gauche vous indique le jour pour lequel l'horaire est donné et la direction de circulation.

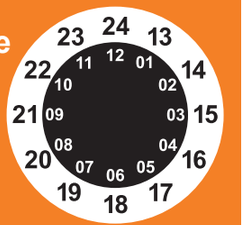

Étape 3
Regardez dans les rangées pour obtenir les heures de départ offertes.

Étape 4
Les trains ou les autobus ne s'arrêtent pas tous à chaque gare. Si vous voyez le symbole → le train ou l'autobus ne s'arrêtera pas à cette gare.

Indications selon un système horaire de 24 heures

De minuit à midi:
00 01 - 12 00

De midi à minuit:
12 01 - 24 00

Légende

- Horaire des trains
- Horaire des autobus
- → Trajet ne sert pas cette station.
- Service d'autobus GO accessible aux personnes utilisant des aides à la mobilité à cet endroit.
- Les services de trains et d'autobus GO sont accessibles aux utilisateurs d'un appareil d'aide à la mobilité à cet endroit.
- P Stationnement disponible.

Notes

APPENDIX E

Level of Service Definitions

Level of Service Definitions

Two-Way Stop Controlled Intersections

Level of Service	Control Delay per Vehicle (seconds)	Interpretation
A	≤ 10	EXCELLENT. Large and frequent gaps in traffic on the main roadway. Queuing on the minor street is rare.
B	> 10 and ≤ 15	VERY GOOD. Many gaps exist in traffic on the main roadway. Queuing on the minor street is minimal.
C	> 15 and ≤ 25	GOOD. Fewer gaps exist in traffic on the main roadway. Delay on minor approach becomes more noticeable.
D	> 25 and ≤ 35	FAIR. Infrequent and shorter gaps in traffic on the main roadway. Queue lengths develop on the minor street.
E	> 35 and ≤ 50	POOR. Very infrequent gaps in traffic on the main roadway. Queue lengths become noticeable.
F	> 50	UNSATISFACTORY. Very few gaps in traffic on the main roadway. Excessive delay with significant queue lengths on the minor street.

Adapted from Highway Capacity Manual 2000, Transportation Research Board

Level of Service Definitions

Signalized Intersections

Level of Service	Control Delay per Vehicle (seconds)	Interpretation
A	≤ 10	EXCELLENT. Extremely favourable progression with most vehicles arriving during the green phase. Most vehicles do not stop and short cycle lengths may contribute to low delay.
B	> 10 and ≤ 20	VERY GOOD. Very good progression and/or short cycle lengths with slightly more vehicles stopping than LOS "A" causing slightly higher levels of average delay.
C	> 20 and ≤ 35	GOOD. Fair progression and longer cycle lengths lead to a greater number of vehicles stopping than LOS "B".
D	> 35 and ≤ 55	FAIR. Congestion becomes noticeable with higher average delays resulting from a combination of long cycle lengths, high volume-to-capacity ratios and unfavourable progression.
E	> 55 and ≤ 80	POOR. Lengthy delays values are indicative of poor progression, long cycle lengths and high volume-to-capacity ratios. Individual cycle failures are common with individual movement failures also common.
F	> 80	UNSATISFACTORY. Indicative of oversaturated conditions with vehicular demand greater than the capacity of the intersection.

Adapted from Highway Capacity Manual 2000, Transportation Research Board

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

7.0 FUTURE BACKGROUND CONDITIONS (BUSINESS AS USUAL)

7.1 Future Background Inputs

The future background (business as usual) volumes were developed based on the combination of general growth and traffic generated by background developments.

7.1.1 General Growth

Existing traffic volumes in Figures 2.3A and 2.3B were grown from the year of the count date to the horizon 2041 based on the compound growth rates provided by the City as shown below.

NORTH/ SOUTH DEMAND

	AM PEAK HOUR		PM PEAK HOUR	
	2011 vs 2041 Without		2011 vs 2041 Without	
Ninth Line	**NB**	**SB**	**NB**	**SB**
-btwn Britannia Rd and Eglinton Ave	1.17%	0.35%	0.49%	0.97%
-btwn Derry Rd and Britannia Rd	1.00%	0.00%	0.00%	1.05%
-btwn 401 and Derry Rd	1.36%	1.13%	0.80%	1.34%
Average	**1.19%**	**0.47%**	**0.46%**	**1.12%**

	2011 vs 2041 Without		2011 vs 2041 Without	
Winston Churchill Blvd	**NB**	**SB**	**NB**	**SB**
-btwn Britannia Rd and Eglinton Ave	1.72%	0.95%	1.19%	1.54%
-btwn Derry Rd and Britannia Rd	1.64%	1.65%	1.88%	1.87%
-btwn 401 and Derry Rd	1.15%	2.76%	3.37%	1.30%
Average	**1.48%**	**1.62%**	**2.02%**	**1.54%**

EAST/ WEST DEMAND

	AM PEAK HOUR		PM PEAK HOUR	
	2011 vs 2041 Without		2011 vs 2041 Without	
	EB	**WB**	**EB**	**WB**
Derry Rd btwn Eight Ln and Tenth Ln	1.94%	2.04%	1.67%	1.45%
Britannia Rd btwn Eight Ln and Tenth Ln	2.71%	2.04%	1.85%	2.39%
Eglinton Ave btwn Eight Ln and Tenth Ln	1.09%	2.08%	1.77%	1.14%
Dundas St btwn just west of 9th Ln to WCB	1.30%	1.69%	1.59%	1.56%
Average	**1.70%**	**1.95%**	**1.71%**	**1.67%**

The above growth rates are based on the City's EMME model projections and are applied on a compound basis. As per discussion with City staff, the growth rates do not assume the widening of Ninth Line within the City of Mississauga (from a two-lane cross-section to a four-lane cross-section). The purpose of this approach is to understand how much background general growth would materialize based on the current configuration of Ninth Line, since the widening of Ninth Line is primarily associated with the development of the Emerging Land Use Scenario under future total conditions. Documentation of this discussion is provided in **Appendix I**.

In addition to the City's growth rates, a 2% per annum growth rate has also been applied to the freeway off-ramp approaches at the following MTO off-ramps, as per MTO's input in Appendix I.

- Highway 401 WB/ Winston Churchill Blvd.;
- Highway 401 EB/ Winston Churchill Blvd.;
- Highway 403 WB/ Winston Churchill Blvd.;
- Highway 403 EB/ Winston Churchill Blvd.;
- Highway 403 NB/ Dundas St.; and
- Highway 403 SB/ Dundas St.

The weekday a.m. and p.m. peak hour general traffic volume growths are presented in **Figures 7.1A** and **7.1B**.

7.1.2 Background Developments

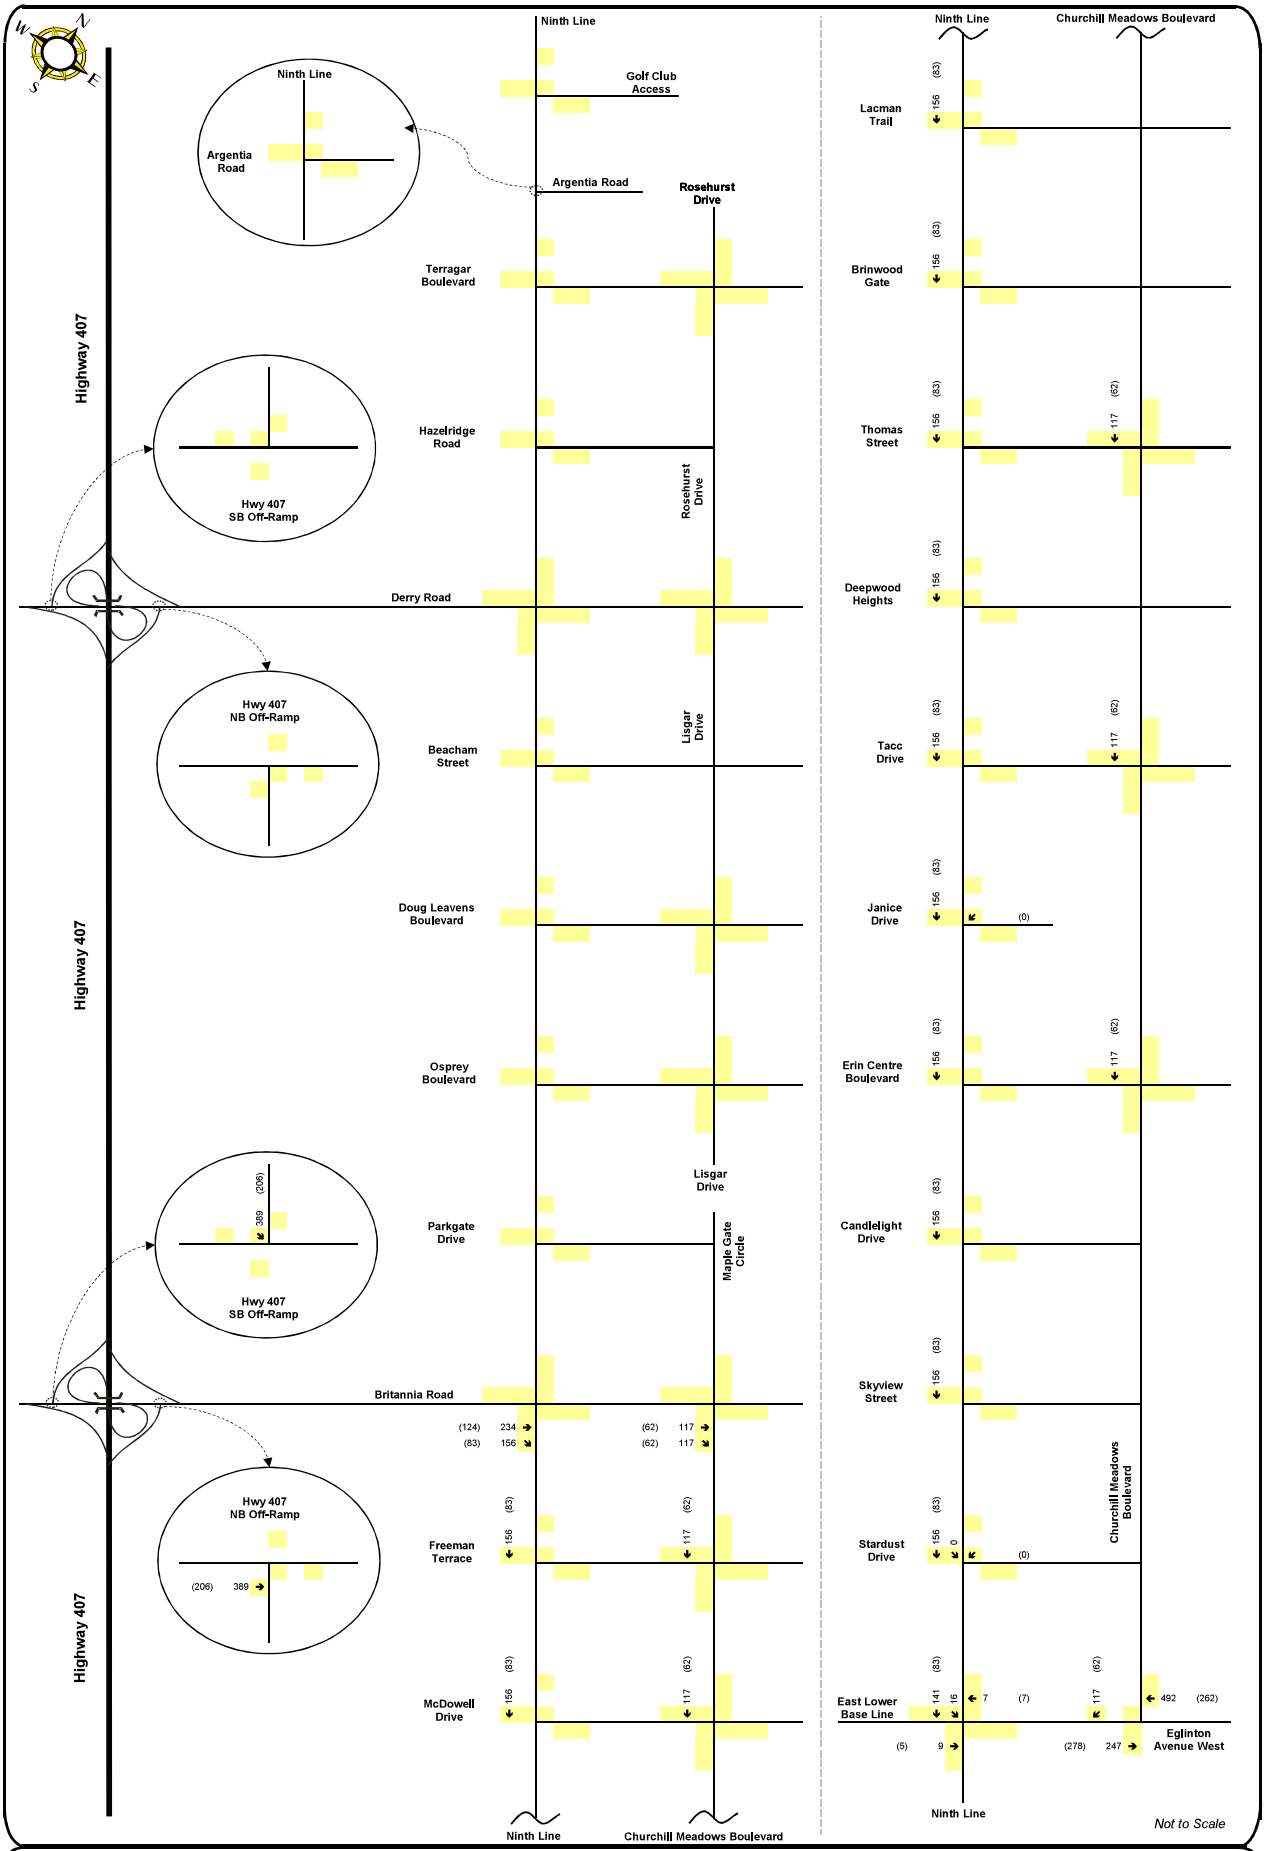

Based on discussion with City staff, the following background developments need to be considered in the future background conditions:

- Erin Mills Development – Northeast quadrant of Highway 403/407: This development comprises approximately 112,630 sq.m. of industrial park, 6,762 sq.m. of retail, and 8,074 sq.m. of office use. City staff provided a Traffic Impact Study, dated February 2014, completed by AECOM to provide context for this Ninth Line study. The site-generated traffic information was extracted and are provided in **Appendix H**. The traffic study only provides high-level site-traffic assignment information and MMM was instructed by City staff to interpret the results and incorporate the results into the future background conditions of this Ninth Line Study. The resulting site-generated traffic volumes for the Erin Mills development are shown in **Figures 7.2A** and **7.2B**.

- ProLogis Industrial Development – 10th Line at Argentia Road: This development comprises approximately 180,507 sq.m. of warehouse land use. City staff informed MMM that this background development has been incorporated in the City's EMME model and thus the growth volumes shown in Figures 7.1A and 7.1B already includes the site-generated volumes of the ProLogis development, therefore, no further forecasting was required.

7.1.3 407 Transitway Initiative

In 2008, Metrolinx's Board of Directors adopted the "Big Move", a plan that outlines a vision for a new regional transportation system, including the 407 Transitway. The Transitway is to be a separate right-of-way, located parallel to Highway 407 and includes running way, stations, platforms, parking, passenger pick-up and drop-off facilities. The Transitway will initially be implemented as bus rapid transit, with an opportunity to convert to light rail transit in the future.

(XX) PM Peak Hour Volumes

MMM GROUP

FIGURE 7.2A

Background Development Traffic Volumes-
Primary Study Area

Based on the 1998 Transitway Corridor Protection Study by MRC for the Ministry of Transportation Ontario (MTO), an earlier iteration of the 407 Transitway initiative consisted of three Transitway stations within the Ninth Line lands study area at Britannia Road, Derry Road and the CPR Galt station north of Derry Road. The subsequent 407 Transitway Assessment by AMEC in 2016 determined the need for only two stations within the study limits, based on comments and direction from MTO at the time of the study. The details of the two stations were not established at the time and will be determined through future Environmental Assessments (EA) in the future.

At the time of this study, Ministry of Transportation – Ontario (MTO) is in the process of initiating an EA of the 407 Transitway initiative. As a result, detailed information regarding the Transitway facilities within the Ninth Line study area is not yet available. It was confirmed with City staff that the information of the two Transitway stations at Britannia Road and Derry Road from the 1998 MRC study would be applicable for the purpose of this study. The details of the two Transitway stations based on the MRC study are provided in **Table 7.1**.

TABLE 7.1
TRANSITWAY STATION INFORMATION

Station	Interim Capacity (Spaces)	Ultimate Capacity (Spaces)
Britannia	640	640
Derry	2,160	3,360
Total	**2,800**	**4,000**

Through discussion with City staff, the ultimate parking supply shown in Table 7.1 for the Britannia and Derry Stations have been assumed to be built-out as part of the future background conditions. This provides a very conservative approach for the purpose of this assessment. It should be noted that the build-out of both stations at ultimate capacity has been assumed in both the future background and the future total conditions so as to provide an “Apples to Apples” comparison.

There are two aspects of the 407 Transitway Stations to consider for this study:

1) Auto trip generation of patrons driving to and from the stations: Based on discussion with City staff and transit experts, the following methodology has been used to forecast the trip generation associated with the 407 Transitway Stations.

   - Assume that 85% of the ultimate parking capacity is utilized during the peak periods. This would be equivalent to 0.85 auto trips per parking space.

   - Assume uniform arrival and departure rates at the stations during the morning (5:30 a.m. to 9:30 a.m.) and afternoon (3:00 p.m. to 7:00 p.m.) peak periods.

This means that the 0.85 auto trips per parking space is occupied at a rate of 0.2125 spaces per hour, or 0.2125 auto trips per hour per parking space.

- The rationale for the chosen morning and afternoon peak periods is that the majority of the trips on transit during the peak hours are work-related. Based on MMM's experience, the commuter parking lots of various transit facilities (i.e., GO Train stations) are typically near capacity well before the actual roadway morning peak hour. This is expected since those taking transit will need to account for the additional time required on transit to get to work. Similarly, commuters leaving a transit parking lot know that they can avoid the afternoon peak hour traffic congestion if they leave earlier or later. Therefore, the use of a uniform arrival and departure rate is an adequate representation of the trip generation behaviour at the future Transitway stations.

- The distribution of the 0.2125 auto trips per hour at the Transitway stations is based on information contained in the Traffic Impact Study for the Toronto Transit Commission (Proposed 650-stall Commuter Parking Lot at Downsview Subway Station – now referred to as Sheppard West Station), dated October 2002. There are many similar characteristics between the proposed parking facilities between the subway and the higher order 407 Transitway stations. For example, many of the motorists who could use this parking lot are already driving past this site on the adjacent roadways and share similar arrival and departure patterns for work-home purposes. In this study, the inbound and outbound distributions during the AM and PM peak hours were determined through parking surveys at the TTC Wilson Subway Station parking lots. The survey indicated that during the AM peak periods, all of the trips generated at the parking lot were inbound. During the PM peak periods, 90% of the trips were outbound and 10% of the trips were inbound. Based on the similarity in parking lot purposes, it was confirmed with City staff that these in/out distributions have been applied for the trips related to the 407 Transitway station parking facilities.

- Based on an arrival and departure rate of 0.2125 trips per hour per parking space, **the two Transitway stations with an ultimate parking capacity of 4,000 spaces would generate 850 inbound vehicle trips during the morning peak hour, and 85 inbound plus 765 outbound vehicle trips during the afternoon peak hour**.

- Based on the Emerging Land Use Concept and the location of the two Transitway stations, two driveways have been assumed for each station as shown in **Figure 7.5A**. It should be noted that these driveways are preliminary locations chosen for the purpose of this study. The location of the final driveways will be pending further studies as part of the Transitway evaluation.

- The Transitway trips were assigned based on the combined consideration of the distribution information extracted from the City's EMME model for the 2041 horizon year for both the AM and PM peak periods, as well as assumptions made on the forecast demographics of rider. For instance, the majority of riders were assumed to enter the study area via the easterly and westerly gateways of Derry Road and Britannia Road, the northerly and southerly gateways of Ninth Line, the residential uses on the east side of Ninth Line. The rationale is that the Transitway stations would attract riders from residential uses within a manageable distance of the stations. For example, people living in Mississauga but who are located closer to Oakville would not likely access the Derry or Britannia Transitway stations because there would likely be another Transitway station that is closer and more convenient.

- The resulting Transitway-related trip generation and assignment are shown in **Figures 7.3A** and **7.3B**.

The documentation of the confirmation on the above methodology from City Staff is provided in **Appendix I**.

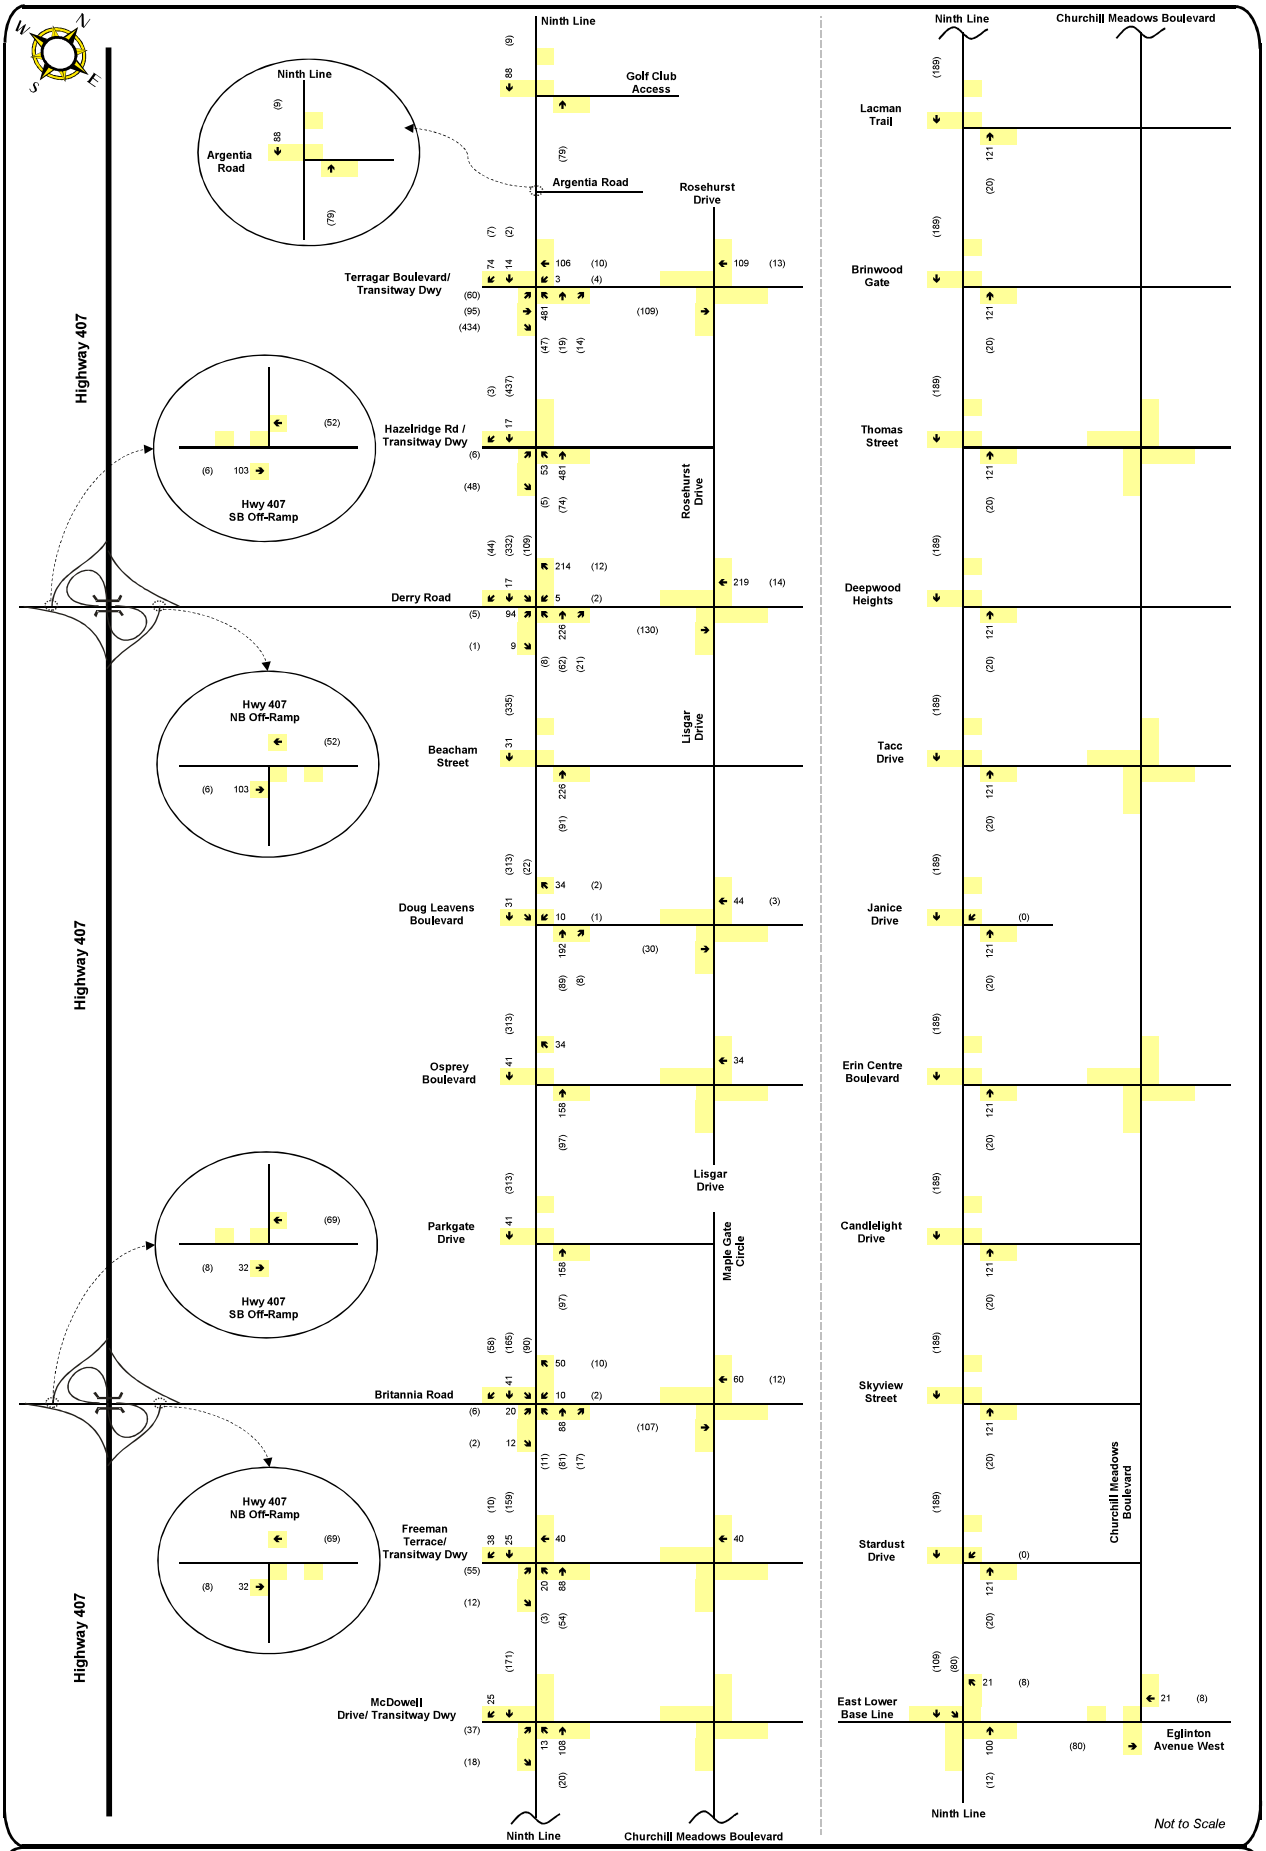

2) Influence on non-auto modal split of the land uses in the vicinity of the stations. The non-auto modal split impacts of the two 407 Transitway stations will be discussed further in **Section 8.2** as part of the trip generation of the Emerging Land Use Concept. It should be noted that a conservative approach has been adopted where the future background non-auto modal splits have been assumed to remain the same as existing splits despite the implementation of the 407 Transitway initiative.

7.2 Future Background Volumes

The 2041 future background volumes were derived by superimposing Figures 7.1A-B, Figures 7.2A-B, and Figures 7.3A-B onto the existing volumes in Figures 2.3A-B. The resulting weekday a.m. and p.m. future background volumes are shown in **Figures 7.4A** and **7.4B**.

7.3 Future Background Improvements

There are two types of future background improvements that were incorporated in the evaluation of the business as usual conditions. The first type are those that are planned and incorporated in the City's EMME model as shown in **Appendix J**. For the second type, City staff asked MMM to identify improvements that are not planned but required to support the future background traffic volumes. Both of these types of improvements are documented below and illustrated in **Figures 7.5A** and **7.5B**.

407 Transitway Traffic Volumes-
Primary Study Area

MMM GROUP

Use has at the intersection. Further discussion of the future evaluation of this off-ramp intersection are provided in Section 9.0; and

- MTO has indicated that the intersection of Highway 401 Westbound off-ramp at Winston Churchill Boulevard is proposed to be improved in the future. Specifically, the intersection is proposed to be converted from a 3-legged intersection to a 4-legged intersection, with the new leg connecting to a new carpool lot. Upon consultation with City staff, the approach this study takes is to continue evaluating the future forecast volumes based on the current configuration of the off-ramp intersection. Since this intersection is a secondary study intersection, the focus will be on the incremental impact the Emerging Land Use has at the intersection. Further discussion of the future evaluation of this off-ramp intersection are provided in Section 9.0.

7.3.2 Additional Required Improvements

The following additional improvements have been identified by MMM to be required in order to accommodate the future background traffic volumes.

Road Widening:

- Widening of Derry Road from 4 lanes to 6 lanes from the City's westmost limit east to Winston Churchill Boulevard. This improvement is critical because the EMME model has forecast high-levels of growth on Derry Road as a result of the widening of this road within Halton Region (from 2 lanes in each direction to 3 lanes). Without this widening, traffic volumes bottleneck in the vicinity of Ninth Line creating significantly over-capacity movements at the intersections of Derry Road/Ninth Line, and Derry Road/ Rosehurst Drive/Lisgar Drive. This is further detailed in Section 7.4.

- Widening of Britannia Road from 4 lanes to 6 lanes from the City's westmost limit east to Winston Churchill Boulevard. This improvement is critical because the EMME model has forecast high-levels of growth on Britannia Road as a result of the widening of this road within Halton Region (from 1 lane in each direction to 3 lanes). Without this widening, traffic volumes bottleneck in the vicinity of Ninth Line creating significantly over-capacity movements at the intersections of Britannia Road/Ninth Line, and Britannia Road/Maple Gate Circle/Churchill Meadows Boulevard. This is further detailed in Section 7.4.

The above recommendations to Regional roads were based on findings in Section 7.4 that showed the future forecasted traffic volumes would exceed the current capacity without these additional widenings. Regional staff noted that the Region of Peel takes a more strategic and holistic approach to addressing Regional road improvements such as road widening issues, and this is articulated in the Long Range Transportation Plan (LRTP). This approach includes exploring if the Ninth

8.0 EMERGING LAND USE CONCEPT TRIP GENERATION

8.1 Land Uses

The site statistics associated with the Emerging Land Use Concept, dated September 18 2016, are provided in **Appendix N**. MMM was advised by the project team to use a population and employment forecast based on a density of a minimum 80 persons plus jobs/hectare for the purpose of this Transportation Assessment. This density is based on the most recent Provincial review of the Growth Plan and represents the planned direction for new Greenfield communities such as the Ninth Line lands. Therefore, the Ninth Line Lands have been subdivided into seven zones, as shown in **Figure 8.1**. **Table 8.1** summarizes the land uses within each zone.

Table 8.1
Emerging Land Use Concept Land Uses

Zone	Residential (units)	Commercial Retail (sq.ft. GFA)	General Office (sq.ft. GFA)	General Light Industrial (sq.ft. GFA)	Transitway Station (spaces)

8.2 Non-Auto Modal Splits

The existing non-auto modal splits for the study area (zones 3615-3617, 3809, 3637-3638, 3810-3811, 3634-3636, 3812, and 4024) for home-work trips were determined from the 2011 Transportation Tomorrow Survey (TTS). The non-auto modal split includes the percentages of public transit, cycling and walking during the weekday morning (7:00 to 9:00 a.m.) and afternoon (4:00 to 6:00 p.m.) peak periods. The existing modal split information is presented in **Table 8.2**.

Justification 5: Collision Experience

Preceding Months	Number of Collisions*
1-12	0
13-24	0
25-36	0

***** Include only collisions that are susceptable to correction through the installation of traffic signal control

Justification 6: Pedestrian Volume

a.- Please fill in table below summarizing total pedestrians crossing major roadway at the intersection or in proximity to the intersection (zones). Please reference Section 4.8 of the Manual for further explanation and graphical representation.

	Zone 1		Zone 2		Zone 3 (if needed)		Zone 4 (if needed)		Total
	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	
Total 8 hour pedestrian volume	10,000	5	10	5	0	0	0	0	
Factored 8 hour pedestrian volume	20,005		25		0		0		
% Assigned to crossing rate	23%		34%		30%		100%		
Net 8 Hour Pedestrian Volume at Crossing									4,610
Net 8 Hour Vehicular Volume on Street Being Crossed									2,000

b.- Please fill in table below summarizing delay to pedestrians crossing major roadway at the intersection or in proximity to the intersection (zones). Please reference Section 4.8 of the Manual for further explanation and graphical representation.

	Zone 1		Zone 2		Zone 3 (if needed)		Zone 4 (if needed)		Total
	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	Assisted	Unassisted	
Total 8 hour pedestrian volume	10,000	5	10	5	0	0	0	0	
Total 8 hour pedestrians delayed greater than 10 seconds	10	10	1	6	2	4	0	0	
Factored volume of total pedestrians	20,005		25		0		0		
Factored volume of delayed pedestrians	30		8		8		0		
% Assigned to Crossing Rate	23%		34%		30%		100%		
Net 8 Hour Volume of Total Pedestrians									4,610
Net 8 Hour Volume of Delayed Pedestrians									12
